 © 2026 Cognizant

A transformational opportunity at your doorstep de-risked and ready

~$195 Mn — *Total 5-year savings vs FIS/ TMS current baseline*

30+% — *Annualized run rate savings Year 3 onwards*

~$25 Mn — ***Cognizant–funded Investments*** *Transition + change management + tooling + operational buffer, at No cost to FIS*

41% — ***AI-led Productivity Uplift - Year 4 onwards***

2490 — ***Day-1 Rebadge ~1000 FTEs to balance risk and speed, complying to end client restrictions***

Zero-Disruption Transition

- **Rebadge ~1000 FTEs in UK and US to ensure zero Day-1 Service disruption**
  12-month, 4-wave transition (Jul 2026– Aug 2027) designed for accelerated right shoring
- **100% compliance to regulatory framework across geographies and end client constraints**
  - TUPE · §613a BGB · Art 7:662 · FDCPA · BaFin EU residency

Dual-Mandate Value Creation (Upfront Savings and AI-Led Transformation)

Deliver early **cost, productivity, and efficiency gains -** by embedding **AI-enabled capabilities** and bringing Cognizant proprietary accelerators/ assets

End-to-End Service Model

- Full managed services with accelerated takeover of **FIS TMS Operations - 2,490 FTEs across NA & EMEA** (excluding 188 FTEs for client exits/ deconversions)
- **Deliver "glass-box" governance model that is real-time,** outcome-led with clear lines of governance and integrated target operating model.

AI led productivity, risk reduction and growth enablers

- Delivering measurable outcomes: **IVR containment 73→85%, AHT ↓ 20%, ↑ STP** with auto scoring/ ML models, digital MLS - enabling **~41% FTE reduction by Year 5**
- Driving growth through: **Time to value reduction of 30-50%, Product Adoption Depth/ Active Cardholder + 5-15%, Lifetime value + 5%**

© 2026 Cognizant

We understand the current landscape & nuances of in-scope

Cognizant has critically reviewed Appendix A & B inputs to confirm our delivery model meets the client objectives set out in the RFP.

Credentials

~$175M	2,678	2,490	188	~60	6	5yrs +2	16 Functional Towers
Revenue	Appx A FTEs	In-scope	Exits FTEs	Clients	Countries	Contract	Voice 1,785 FTEs (72%) Non-Voice 705 FTEs (28%)

Site and Languages

- **Sites:** Columbus GA · MK/Coventry · Hamburg · Barneveld · Manila TMS
- **5 languages (EN primary):** DE/NL from MK/Coventry & Vilnius, FR-CA from Halifax, ES from El Salvador & Columbus GA.

Work Split

- **Systems & Platform Migration:** Cognizant runs on FIS-licensed platforms (TS2, DMS, FDS, Avaya AXP) from Day 1 — no replacement needed. WFM/QM tooling (Aspect/Verint) to be confirmed at kick-off.
- **7 service lines:** Voice (IB/OB), Non-Voice, Physical Bureau, Card Destruction, Scanning, Paper Correspondence & Support Overlay. Mix is 72% Voice / 28% Non-Voice. Physical bureau (card destruction, scanning, OOH) is onsite only

Observations

- **EMEA:** Onshore-only mandates for UK, Germany, Netherlands (e.g., MK, Barneveld, Hamburg); no offshore or WFH. Strong regulatory overlay (FCA, GDPR, PSD2, BaFin, CIFAS). DR restricted to UK/EU sites
- **North America:** Primarily English delivery from US & Canada; Spanish/French for select clients. Regulatory constraints tied to FDCPA for outbound calling/ collections
- **UK-4 Bureau OOH (95 FTEs)** handles card destruction, scanning, physical mail and out-of-hours bureau processing. (PCI DSS chain-of-custody applicable)
- **Explicit client constraints for EMEA clients:** No offshore or WFH permitted under existing contracts. (right shoring will require explicit client consents)
- **Function-level EMEA breakdown is inferred** as operation sites data is available only for NA., we will need to calibrate the EMEA breakdown in subsequent phase.
- **Pending deconversion (188 FTEs)** - Four clients are deconverting (NA-1 Manila 116, NA-1 Col, GA 29, UK-5 28, NA-6 15)
- **Revenue bands** are directionally correct but the long-tail concentration risk is underappreciated
- FIS already has **strong IVR Containment** rate against the industry baseline of ~60%

⛔ Email is out of scope and EMEA FTEs inferred from site totals and validated against Appendix A FTE totals.

$195m saves over 5 years

As requested, Tech stack migration cost from TMS to FIS is estimated to be $5.2m and has not been factored in the above business case.

 © 2026 Cognizant

Assumptions behind Proposal covering type of pricing model, timing, locations, AI & Digital and Productivity Levers

1. In-scope for Cognizant = 2,678 − 188 = 2,490 FTEs. All resource loading, cost models, and transition plans are based on 2,490 FTEs.

2. All offshore deployment (Manila, Coimbatore, El Salvador) requires end-client approval. Current model assumes 100% offshore approval for in-scope clients.

3. 188 FTEs excluded from migration scope for exit clients. These remain at TMS legacy locations. Cognizant does NOT rebadge or migrate these roles as they are pending client deconversion.

4. All voice locations must be PCI DSS complaint. Need confirmation is external certification is required as the Certification timeline: 3-6 months.

5. Model assumes all 2,490 in-scope clients approve outsourcing to Cognizant. If any client declines, both the revenue AND the associated offshore savings are lost.

6. AI costs shown are deployment / implementation only, and do not include underlying compute or storage, which are assumed to be provided via FIS's existing environment

7. Rebadged FTEs will continue to operate out of FIS existing facilities

8. All cost and staffing assumptions depend on FIS extending the existing/ new licenses and access to FIS TS2, FDS, and CRM platforms.

9. Currently 100% Work from Office is assumed for the proposed commercials.

10. EMEA locations will be subjected to local employment /regulatory guidelines

11. If more than 50 NA staff (Columbus GA) decline rebadge and Cognizant terminates, 60-day WARN Act notice required. Will have to be assessed based on final rebadge scope.

12. Rebadge timeline for will have dependency on FIS HR policies and procedures

Assumed FIS will allow Cognizant to deploy proprietary accelerators to unlock efficiencies

 © 2026 Cognizant

Summary of vendor costs and investments across the program

Cognizant's Investment Commitment — $25M+ in Program Enablement

Transition & Knowledge Transfer ~$16M	Dedicated transition PMO, structured KT bootcamps per LOB wave, and a shadow-and-certify model ensuring zero service degradation on go-live. All transition costs absorbed by Cognizant ,no day-rate billing during knowledge transfer.
Technology & Tooling ~$3M	Proprietary accelerators deployed at no additional license cost: workflow automation, real-time ops dashboards, SLA tracking, anomaly detection, and reporting suite. Pre-built integrations with FIS platforms (TS2, DMS, FDS) reducing stand-up time and integration risk.
Offshore Buffer Capacity ~$6M	**(5% dedicated buffer)** A pre-funded 5% offshore capacity buffer held in reserve across Manila and Coimbatore absorbing volume spikes, attrition cover, and ramp risk without impacting contracted SLAs or triggering change orders.
Total Cognizant Investment: ~$25M	*This is not a cost passed to FIS. It is Cognizant's committed investment in making this engagement a success.*

Leverage Cognizant's larger investment of approx. $1 billion in Gen AI capabilities

Access to Bluebolt™ Program employee idea-sharing + Access to our strategic partners + Dedicated Process Excellence + Mortgage Transformation Office = Continuous Improvement & Innovation

 © 2026 Cognizant

Key solution design principles to achieve the intended outcomes

Co-vision & Refine Shared-Service Ready Workflows (Blue-Printing)

Build a distributed workforce framework

Prioritize "right-shoring" and "safe-landing"

Fully unlock labor arbitrage and capture quick savings

Risk mitigated TSYS to FIS migration and integration

Goal to ensure convergence to unified end state tech stack

Early deployment AI Overlay interventions

Accelerate adoption & fast-track AI/Agentic deployments

SOLUTION DESIGN PRINCIPLES AND CONSIDERATIONS

- Fully unlock labor arbitrage and capture quick savings – within client contract constraints
- If FIS secures incremental client consent for offshoring onshore-constrained FTEs, each 10% shift of the 996 onshore FTEs to offshore unlocks additional savings. Target: UK-1/2/3/4 contract renegotiation within 12-18 months post go-live.
- Cost take-out without breaching regulatory obligations (FDCPA, TUPE, BaFin data residency) or client contracts
- Standardised SOPs by tower, jurisdiction and risk profile
- Clear separation: Voice / Non-Voice / Regulated / Non-Regulated
- Embedded tracking, reporting and SLA governance per tower
- Institutional knowledge retained via 40% rebadge (zero Day-1 knowledge loss)
- Scalable footprint - FIS facility leverage to enable business continuity
- Parallel rollout aligned to wave sequencing - no single-point-of-failure
- Release cycles synchronised with TSYS platform constraints
- Human-in-the-loop for all regulated decisions (Fraud, Disputes, Collections)
- Accelerated adoption & fast-track AI / Agentic deployments with Cognizant assets/ accelerators

 © 2026 Cognizant

Proposed solution summary

FIS TSYS Managed Services

Service Towers

- Customer Service (Voice)
- Fraud Inbound / Outbound
- Disputes (Inbound + Back Office)
- Collections (FDCPA)
- Loyalty
- Physical Bureau (OOH, Card Destruction)
- Quality, Training, WFM, Reporting, Governance

Client / Volume

- 60 issuer clients
- NA + EMEA footprint
- 24x7 operations with regulatory constraints

+

Platform

- TSYS TS2 / TS1FIS FDS (Fraud)
- Avaya
- AAEP / CMS
- NICE / Verint

+

Strategic Priorities

- Zero disruption transition
- Regulatory compliance first
- Structural cost reduction
- AI-led, non-linear productivity

Cognizant Solution Response

Proposed Approach – Prioritize stabilization and rebadging first, then layer AI and automation in parallel - achieving the target operating model by Month 24

Base Camp 1.0 (Month 0 to 12)

People & Delivery

- 2,490 in-scope FTEs (2678 FTEs minus 188 FTEs for deconversions/ client exits)
- ~1000 FTE rebadge in NA and UK on Day-1
- 100% Work-From-Office during transition

Location Model (Day-1 safe landing)

- Onshore: Columbus GA, MK/Coventry UK
- Nearshore: Halifax CA, Bucharest RO, El Salvador
- Offshore: Manila PH (Voice), Coimbatore IN (Non-Voice)

Outcome

- Service continuity protected
- Institutional knowledge retained
- Cognizant assumes full delivery accountability

Base Camp 2.0 (Month 6 to 24)

AI & Automation Overlays

- IVR Containment uplift (74% → 85%)
- Fraud ML auto-decisioning (0% → ~55%)
- Improved STP for disputes & back office
- AI QA auto-scoring and agent assist
- RPA for case workflows and reporting

Operating model evolution

- Voice stabilized first → Non-Voice optimized next
- Progressive FTE reduction driven by productivity, not attrition
- Embedded governance and value tracking

Outcome

- Measurable productivity uplift
- Reduced AHT, higher FCR, lower call volumes
- Risk-controlled automation rollout

Summit : Target Operating Model (by M24)

Shared Service Utility -FIS TSYS End State

- Consolidated Service Engine
- AI-Enabled Operations

TSYS TS2 / FDS / Avaya AAEP (core) | Cognizant AI180° overlays | Reporting & analytics self-serve

Strategic Outcomes

- ~40+% structural FTE reduction by year 4
- Platform ready for issuer growth and new client onboarding

© 2026 Cognizant

Journey towards target state

Transition Guiding Principles and Implementation Approach

Grouping Logic | Sequencing Rationale | Dual-Run Model | Risk Mitigation

Transition Strategy

- **Scope:** 2490 FTEs across NA & EMEA with 16-function delivery spanning Voice (72%), Non-Voice (25%), and Physical (3%) operations
- **Overall transition -** 12 months , 4-wave transition (Jul 2026–Aug 2027) solutioned to ensure minimum disruption on Day-1
- **Rebadge-** 1000 FTES - Day 1 Rebadge taking over existing FIS facility
- **New Transition** 1490 new transition in 7 locations 100% WFO assumed
- **Exit-** 188 FTES, 4 clients De-converting remain at TMS
- **Each function assessed across:** Process Maturity | Process Complexity | Scale | Restrictions

Secure Knowledge Management (Tacit & Explicit)

- **Targeted rehiring** to speed up setup, reduce risk, and preserve knowledge and experience
- Shift from informal knowledge to **documented processes** for consistency.
- Utilize **digital tools** like UiPath Task Capture and SARA for documentation.
- Establish a **strong change and communication framework** aligned with transition checkpoints.

Dedicated Leadership and On-site Relationship

- **Senior Executive Leadership** involvement to commit resources| monitoring progress and removing roadblocks
- **Dedicated transition PMO**, structured KT bootcamps per LOB wave, and a shadow-and-certify model ensuring zero service degradation on go-live. All transition costs absorbed by Cognizant no day-rate billing during knowledge transfer
- **Delivery Leadership** across regions for the program starting from Transition phase and continuing into service delivery
- On-site Relationship leaders **stationed at FIS offices** to capture real-time feedback and inputs

High Visibility Project Governance

- **Establish TMO** office from Day 1 for Governance and visibility of performance SLAs & milestones
- **Cadence:** Daily| Weekly| Fortnightly reviews ensure timely issue/risk resolution
- **Transactive tool** provides real-time| transparent governance and risk tracking

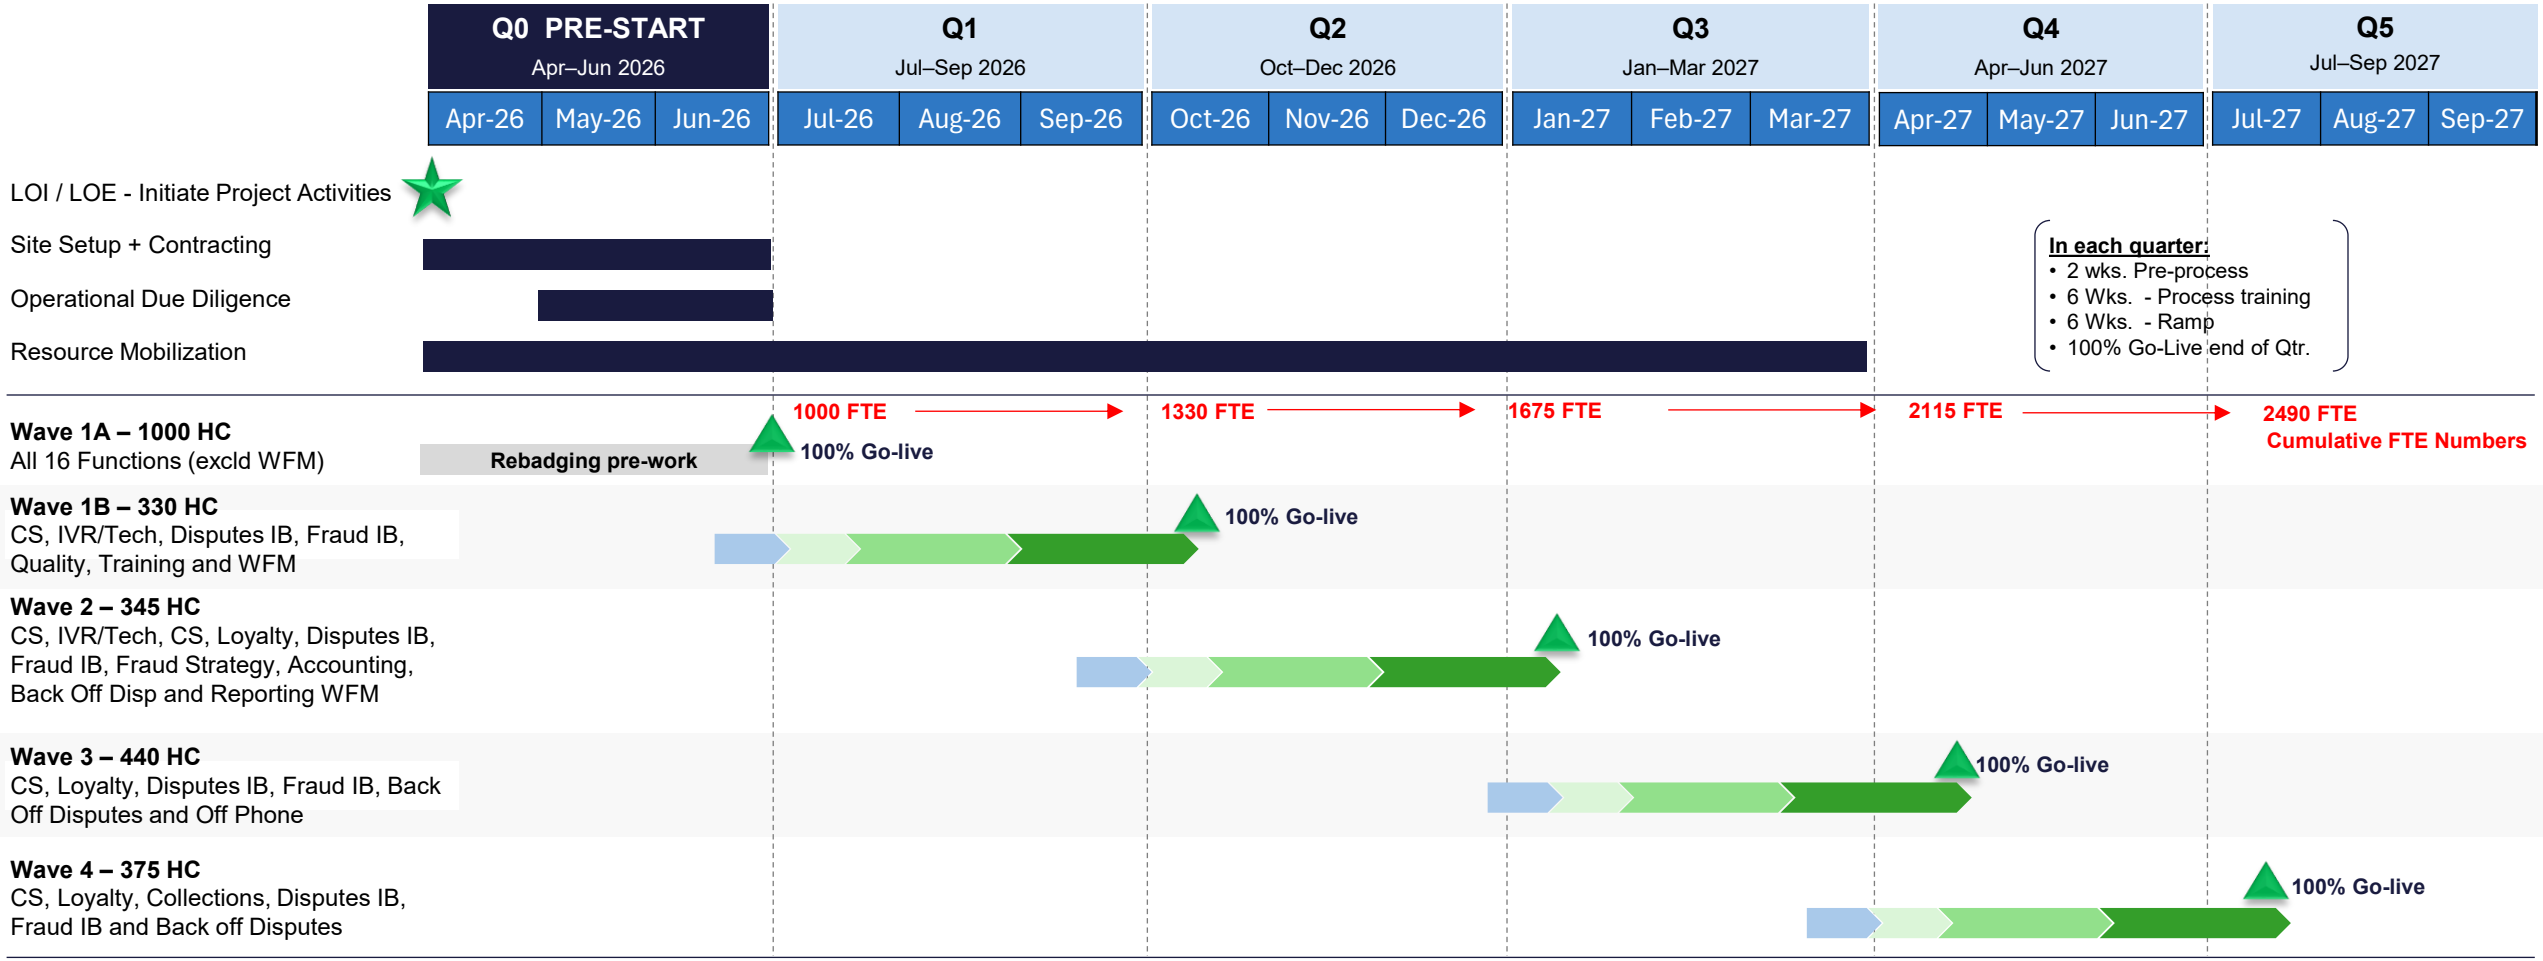
W1A (Rebadge)	W1B (New Transition)	W2 (New Transition)	W3 (New Transition)	W4 (New Transition)	Total FTEs	Target Country	Complexity	FTE Scale	Wave Assignment Rationale /Regulatory Constraint
CS	CS	CS	CS	CS	666	US, UK , CA, El Sal, PHP & Rom	All	>300 FTEs	To protect customer experience and regulatory compliance, enabling phased stabilization of knowledge, tooling, and service KPIs under FCA, PCI DSS, TUPE, and no-WFH constraints before full volume ramp.
Disputes Inbound	Disputes Inbound	Disputes Inbound	Disputes Inbound	Disputes Inbound	337	US, UK , CA, El Sal, PHP & Rom	All	>300 FTEs	Disputes Inbound transitions over 4 waves to protect settlement accuracy and regulatory timelines under FCA, card-scheme rules, and PCI DSS, enabling staged validation of intake, coding, and downstream recovery while honoring TUPE, Works Council, and no-WFH constraints.
Fraud Inbound	Fraud Inbound	Fraud Inbound	Fraud Inbound	Fraud Inbound	718	PH, US,UK & Rom	All	>300 FTEs	Fraud Inbound is transitioned over 4 waves to safely scale volume-driven work under FCA/FDCPA/PCI DSS controls, enabling pilot stabilization, site certification, and progressive capacity ramp while honoring TUPE, Works Council, no-WFH, and data-residency constraints.
loyalty		loyalty	loyalty	loyalty	97	CA, ElSAl & US	M	<100 FTEs spit b/w 3 waves	NA client with FR-CA Loyalty component. Halifax CA agents hired Q2 for FR-CA coverage. FDCPA, PCI DSS (VDI)
Back Office Disputes		Back Office Disputes	Back Office Disputes	Back Office Disputes	432	IND, US& UK	L & H	>300 FTEs	Back Office Disputes transitions in 3 waves to safeguard chargeback accuracy, recovery value, and regulatory timelines under FCA and card-scheme rules, enabling staged capacity ramp without settlement or audit risk.
IVR/Tech	IVR/Tech				6	US, UK & IND (2 FTEs each)	M	<35 FTEs	Support infrastructure must go Q1 — WFM tooling, QA framework, Training LMS all needed before any client agents onboard. Priority rebadge TLs, Fraud seniors, BO supervisors
Quality	Quality				32	IND, US& UK	H	<35 FTEs	
Training	Training				31	IND, US& UK & PHP	M & H	<35 FTEs	
WFM	WFM				13	PHP	M	<35 FTEs	
Senior Leadership					5	US & UK	H	<35 FTEs	
Fraud Outbound					93	US & UK	H		
Fraud Strategy		Fraud Strategy			12	Ind & US	All	<35 FTEs	Fraud is transitioned in a single wave to protect Day-1 regulatory compliance, data security, and decision integrity, driven by FCA/FDCPA/PCI DSS requirements, TUPE & Works Council constraints, no-WFH clauses, and EU data-residency mandates.
Accounting		Accounting			8	Ind & US	H	<35 FTEs	Accounting transitions in a single wave to preserve ledger integrity, SOX controls, and audit accountability, avoiding reconciliation risk and split ownership during close cycles.
Reporting		Reporting			6	Ind & US	High	<35 FTEs	Reporting requires a single-wave transition to preserve data integrity, governance consistency, and audit accountability.
Off Phone			Off Phone		25	IND, US& UK	L & H	<35 FTEs	Off-phone activities require a single-wave transition to maintain unified queue ownership, control integrity, and operational efficiency.
Collections				Collections	9	ElSAl & US	L & H	<35 FTEs	FDCPA-regulated outbound Collections (Columbus, GA)
Exit – 4 Clients					188				Deconverting with no migration; natural run-off through exit on 30/04/2026.

 © 2026 Cognizant

Client Migration Wave Timing & Sequencing

Cognizant recommends rebadging ~40% of TMS staff in-location - balancing institutional knowledge with speed of transition.



Assumptions

- Timelines will be jointly reviewed & finalized during workshop sessions
- 188 FTE / 4 Clients – De-converting remain at FIS
- Process Training / virtual training / certifications to be conducted by FIS trainers
- FIS trainer / SME support required during training & ramp period

Mobilization (2wks) · **Pre-process / Access Provisioning (2wks)** · **Process Training (6 wks.)** · **Ramp-up (6 wks.)** · **100% Go-live**

 © 2026 Cognizant

Client Migration Activities Responsibility Matrix

R = Responsible | A = Accountable | C = Consulted | I = Informed

Workforce Rebadging Proposal

REBADGING RATIONALE

Day 1 commitment — ~1,000 FTEs rebadged on transition

01 End-client restrictions

Select clients contractually prohibit offshore or third-party staffing changes, requiring direct employee continuity from Day 1.

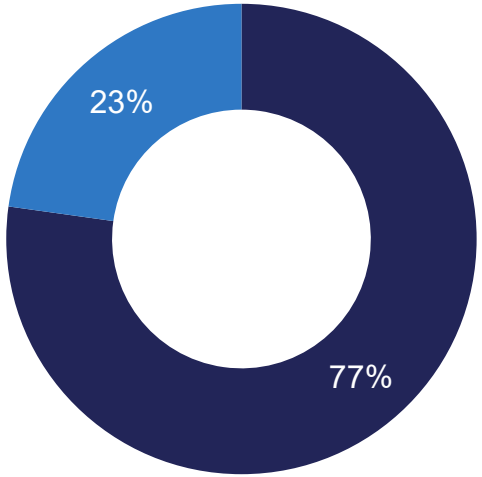
02 Regulatory obligations

UK TUPE (769 EMEA FTEs) mandates automatic transfer; US FDCPA & German BaFin data residency further restrict staff mobility.

03 Local operational footprint

Bureau, scanning & imaging functions are explicitly listed as onsite-only in scope — offshore substitution is non-viable.

STAFFING MIX BY REGION



UK / EMEA
769 FTEs
77%

United States
227 FTEs
23%

Proven expertise : Our rebadging credentials and impact

Successfully transitioned **55,000+ employees globally** into Cognizant across multiple programs

95%+ offer acceptance rate worldwide, demonstrating strong employee trust and value proposition

80%+ retention rate after 2 years, indicating sustained engagement post-transition

Dedicated, experienced global transition team managing end-to-end people transition with minimal disruption

© 2026 Cognizant

Our vision is to **transform FIS managed services** into a leaner, smarter operation, while laying the foundation for growth across its issuer portfolio

- ***Experience led lens to transformation***
- ***Five-year transformation rollout view***
- ***Productivity improvement drivers***
- ***Technology integration and migration plan***

 © 2026 Cognizant

By bringing an experience-led lens to this transformation, we aim to unify the operational and tech transformation efforts for both productivity goals and growth ambitions

Productivity
via AI-enabled tech transformation

Customer self-service experiences

- Create self-service journeys that feel intentional and helpful—not like deflection.
- Reduce customer effort while improving containment and resolution quality.

Re-imagination / Optimization

- Workflow redesign to drive efficiency
- Re-imagination of how work is executed

Contact Center Agents Experience

- AI-supported agent experiences (dashboards, unified views, SOP prompts, guided workflows).
- Improved FCR, AHT, quality, compliance, and fraud-handling efficiency.
- Reduce noise and variability during dual-run and transition periods

Momentum

Growth
via modernization & data-driven insights

Cross-sell and upsell journey design (B2B2C) — leverage the now-stable, low-friction service experience to introduce revenue-generating moments

- Service-Embedded Card Feature Activation Nudges
- Premium Servicing Tiers for High-Value Issuer Programs
- Digital Tool Adoption Programs That Unlock Additional Platform Revenue

Experience blueprints for new client expansion (B2B)

- Incremental Scope Capture Through Service-Triggered Add-On Operations

 © 2026 Cognizant

Overall 5-year Transformation Rollout Plan : An overview of experience led hyper automation implementation plan

As we transition and stabilize the processes, we will commence implementing a range of transformation initiatives across process standardization, optimization, increased automation and best-in-class management reporting & insights

 © 2026 Cognizant

How we build momentum for FIS TMS

A phased, scenario-resilient approach — with a mandate that evolves as the transformation matures.

In the early phases, a cross-delivery pod focuses on identifying and designing quick-win opportunities — reducing friction, improving containment, and building credibility — while broader cost take-out happens in parallel across operations. As the transformation stabilizes, the mandate shifts: from defensive design (protect SLAs, reduce rework) to offensive design (grow revenue through intentional cross-sell and upsell journeys, retention experiences, and new-client onboarding blueprints).

Phase 1
Y1 (Q1–Q4 2026/27)

Transition & stabilize

- Experience gap analysis — during waves 1-4 Personas, journeys, problem statements & hypotheses (etc.)
- Identify and prioritize AI agentic opportunities for intervention across Loyalty, Fraud & Collections
- Rapid call-volume audit + deflection insights — lock IVR optimization baseline before automation layer is applied
- Baseline dashboards & workflow during dual-run stabilization (zero SLA breach target)
- *Mandate: defensive — reduce friction, protect SLAs, build confidence while TUPE and site ramp-up execute in parallel*

Phase 2
Y1–Y3 (2027–2028)

Automate & Expand

- Deflection-first redesign across digital, IVR, and assisted service — designed to land as all 2,490 FTEs come on-platform
- Design the agent experience around AI QA auto-scoring, STP Disputes, dashboards, guided workflows, feedback loops
- Fraud as a first-class parallel journey — design ML-driven fraud workflows so agentic actions are transparent to agents and customers
- UX for RPA case workflows — ensure automation feels seamless, not bolted-on
- AI-enabled self-optimizing operations (AI180°) — design the experience layer that makes automation invisible to the end user
- Fraud auto-decisioning plateau at 55% — design trust signals and transparency for the remaining human-adjudicated cases
- *Mandate: quick wins at scale — cost take-out is accelerating; XD ensures adoption sticks*

Phase 3
Y3–Y5 (2028–2031)

Optimize & Scale

- Optimize journeys end-to-end as IVR containment scales to 90% and AI deflection reaches 28% of contacts
- Design the agent handling model for the 2,678→1,940 FTE reduction: AHT −20% voice, −35% NV through UX-driven workflow consolidation
- STP Disputes →70%, Fraud ML →55% — design the human-in-the-loop experience for exception handling and escalation
- Tie journey redesign to the future-state FIS platform migration — no experience debt carried forward
- Cross-sell and upsell journey design — leverage the now-stable, low-friction service experience to introduce revenue-generating moments
- Experience blueprints for new-client expansion — proven playbooks repackaged as scalable onboarding templates
- *Mandate shifts: defensive → strategic — design now protects margin and prepares for growth; Explore Mandate: fully growth oriented — AI drives revenue, retention, and client expansion*

Solution Levers driving productivity improvements…

Domains	Solution Levers	Description	Efficiency %
Continuous Improvement	Effective workforce management	Improve utilization, Cross-training & multi-skilling, real-time performance monitoring, intelligent workforce management	12%
	LSS Projects to enhance efficiencies	Process standardization through Value stream mapping and lean projects	
	Optimize agent performance	Bottom quartile management & targeted coaching to reduce inter operator variability	
	Hands-off and knowledge Management	Knowledge transfer between CEC & BO to reduce touch points, TAT and improved CX	
	Metric Measurement	Adopting balanced scorecard approach / Generate insights through FLM dashboards	
	Low Code Automation	Quick shortcut keys to improve repetitive tasks and eliminate NVA's	
Technology Operations	AI powered Agent Assist	GenAI powered by Agent Assist – Sentiment & Interaction Analytics	22%
	Conversational IVR	AI powered intelligent self-service driven interaction across voice channel	
	Chatbot	AI powered proactive chat-based interactions on web channel	
	Gen AI Knowledge Assist	Gen AI Knowledge Assist Tool to provide recommendations and next best actions	
	GEN AI based fraud detection system	Fraud propensity score prediction using GEN AI model	
AI Layer	Improved Operations	Total Case Ownership and structured Service Quality Management	7%
	Empowered Users	Persona-driven, Self-Help platforms to drive adoption of ChatAI and VoiceAI	
	AI and Automation	Workflow Automation, BOT and Script libraries, GenAI-powered solutions	
	Stability and reliability	Process standardization and OCM, including Left Shift & self-healing automation	

Outcomes

- ↓ Learning curve and training ~10%
- ↑ CSAT improvement ~7%
- ↑ Containment Rate ~12%
- ↓ Average Handle time ~20%
- ↑ First call Resolution ~8%
- ↓ Customer escalation ~5%
- ↑ Agent experience ~15%
- ↓ After call work / Abandonment ~25%
- ↓ Total Cost of Ownership
- ↑ Forecasting Accuracy ~10%
- ↑ BCP, Business resilience
- ↑ Traceable, repeatable digital trail; Audit ready

% Potential Impact	Y1	Y2	Y3	Y4	Y5
	3%	22%	38%	41%	41%

Technology Integration Approach for Overlays

- Cognizant runs directly on TSYS TS2 (card processing), FDS (fraud detection), Avaya AAEP (ACD/routing), and NICE Actimize from contract signature; eliminating migration risk and protecting service continuity
- NICE CXOne integrates all assisted channels (Voice, Chat, SMS, Secure Messaging, IVR) via CTI/TAPI, REST API, and WebSocket connectors to TSYS TS2, FDS, and CRM ; delivering unified routing, call recording, all service towers
- AI agentification prioritized shared agent across processes/platforms integrated via API overlay; not platform replacement. ANI pre-fetch, fires at queue entry; biometric auth runs concurrently with routing; RTG guidance pushes to agent desktop in real time. Zero dependency on TSYS core replacement to realize savings.
- Customer Service will target 45% AI use cases active; Fraud LOB at next phase with ML auto-decisioning reaching 55%; Loyalty & Disputes to follow with STP at 70% and all shared agents fully deployed. BaFin EU data residency enforced via Vilnius LT node throughout
- Encryption on all voice channels; GDPR/UK DPA data residency controls; BaFin EU fence for Germany-1 data; FCA-permissioned AI tools for UK operations. Integration architecture is audit-ready from Day 1 ; supporting PCI, ISO 27001, SOC 2 Type II, and DORA compliance simultaneously.

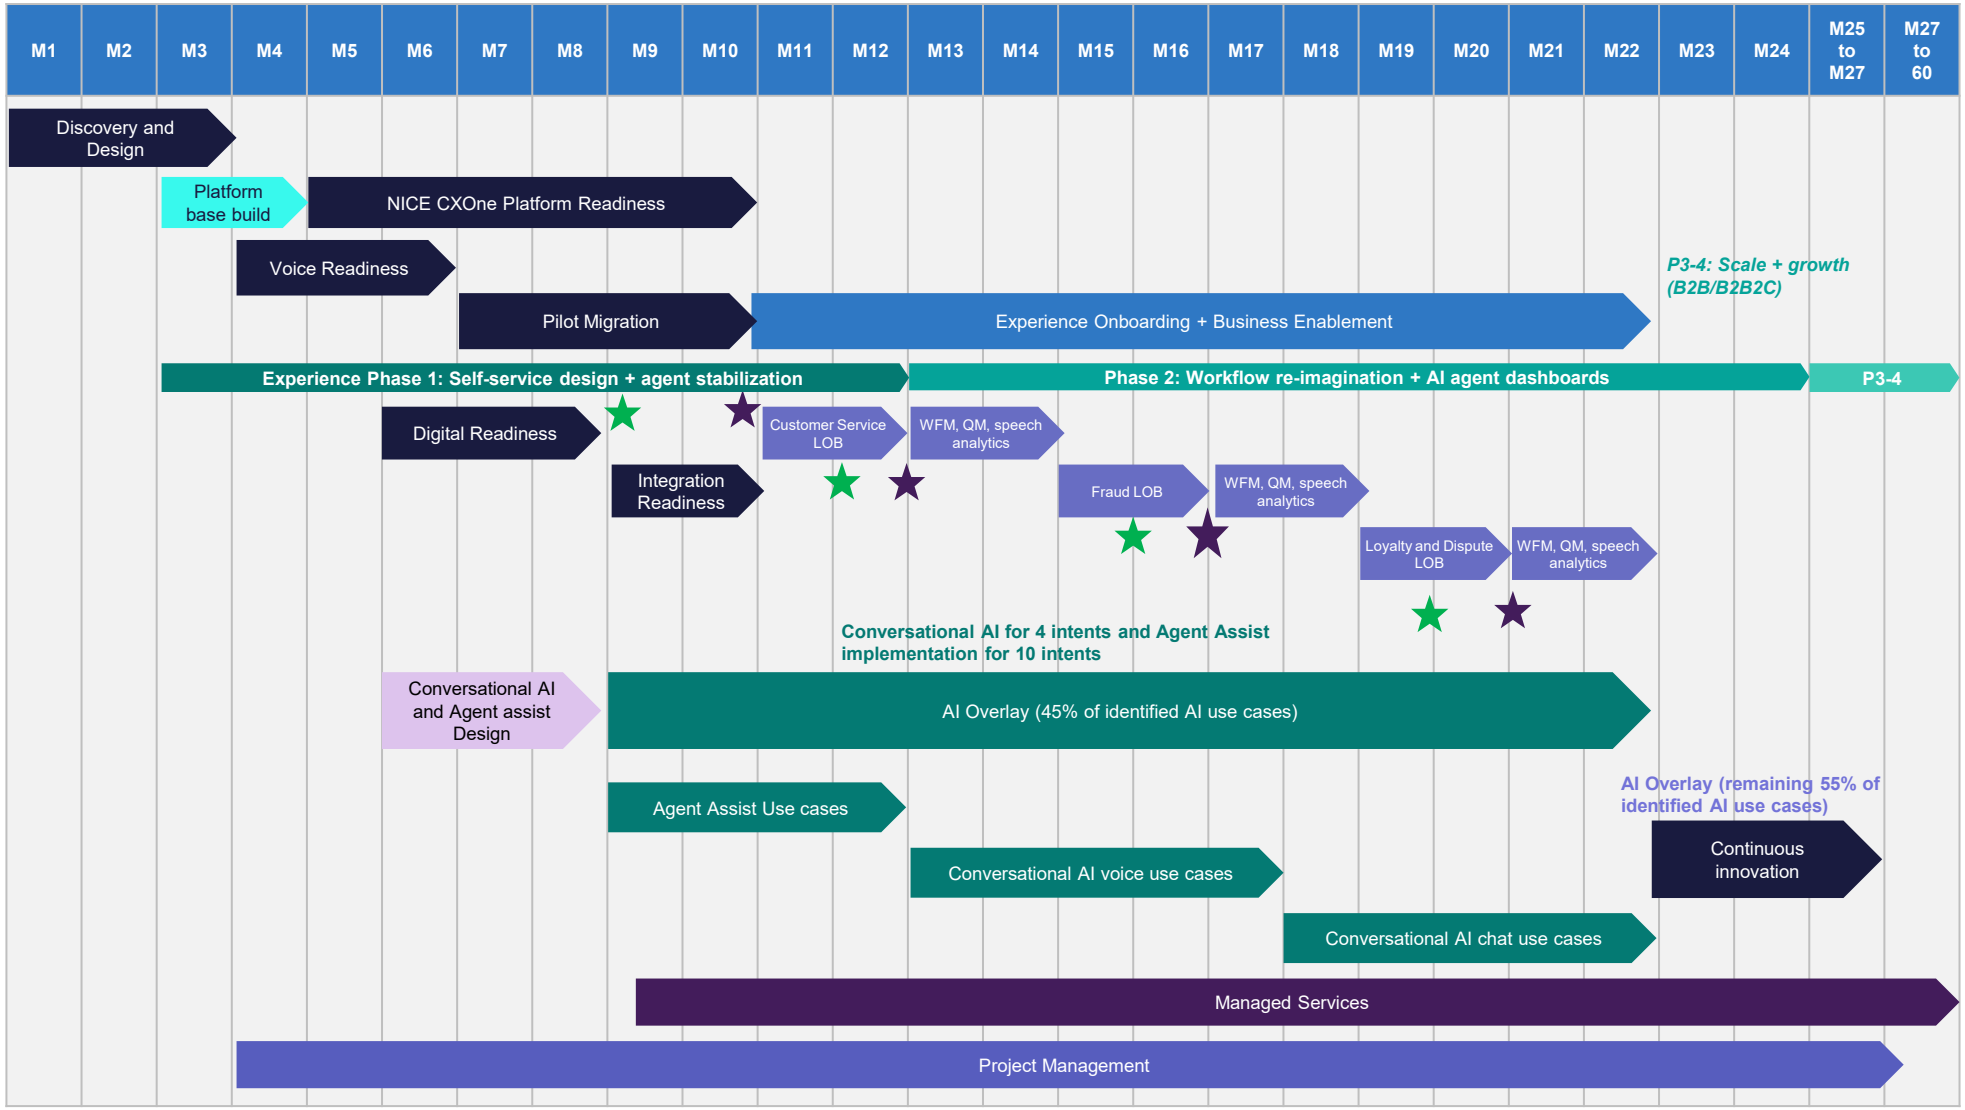
High level Technology Migration and Integration Plan with Timing & Sequencing



Summary

- **Program spans M1–M60 across three phases.** Discovery & Design kicks off immediately, followed by platform build (NICE CXOne, Voice, Digital & Integration Readiness) through M8.
- **Migration runs M4–M15** in three LOB waves Customer Service first (M8), then Fraud (M12), then Loyalty & Disputes (M17) each followed by WFM, QM and speech analytics tooling.
- **AI is embedded throughout**, not bolted on: Conversational AI (4 intents) and Agent Assist (10 intents) activate from M8, covering 45% of identified AI use cases by M22, with the remaining 55% delivered in the P3-4 scale phase (M25–M60).
- **Parallel workstreams** Managed Services and Project Management run continuously from M8 to M60, underpinning all delivery

Go Live EMEA **Go Live US**

Regulatory Requirements and Vendor Certifications & Experience

Coverage across all 7 delivery locations | Pre-existing certifications | Experience confirmed

Cognizant will comply to all regulatory framework requirements.

- Compliance towards all regulatory, data privacy and consumer protection requirements such as GDPR, Reg E, CFPB, etc.
- Robust security standards aligned with industry frameworks – ISO 27001, SOC 2 and PCI DSS
- Independent certifications and regular third-party audits to validate compliance and security posture.

Regulation / Framework	Scope	Cognizant Certification / Approach
PCI DSS Level 1	All voice locations (Columbus GA , Manila, El Salvador, MK/Coventry UK , Halifax CA)	Compliant
FCA Authorization (UK)	All UK-regulated services: CS, Fraud, Disputes, S75, Back Office (MK/Coventry UK)	Compliant
GDPR (EU/UK)	All EU/UK data processing: Leeds, Vilnius, Coimbatore (standard contractual clauses)	Compliant
BaFin Data Residency	Germany-1 client: all fraud and disputes data must remain in EU	Ensure adherence
613a BGB (Germany)	Germany-1 workforce transfer (244 FTEs)	Ensure adherence
TUPE 2006 (UK)	All UK client workforce transfers (~889 FTEs)	Ensure adherence
FDCPA (USA)	Collections outbound, Fraud Outbound (NA clients)	Compliant
Reg E (USA)	Disputes Inbound: provisional credit (10-business-day SLA)	Compliant
CFPB (USA)	Consumer complaint handling, collections, disputes	Compliant
ISO 27001 / SOC 2 Type II	All Cognizant delivery locations	Compliant
WARN Act (USA)	NA workforce changes affecting >50 employees at Columbus GA	Ensure adherence
Art 7:662 BW (Netherlands)	Barneveld Bureau workforce transfer (92 FTEs)	Ensure adherence
DORA (EU)	EU: Fraud Inbound, Fraud outbound, Fraud Strategy, Disputes & Chargebacks	Compliant
TCPA (USA)	Customer service – outbound calls, Collections outbound, Fraud Outbound (NA clients)	Compliant

Rules behind Pricing Model for scenarios such as volume fluctuations, new sales and attrition

Fixed Fee Contract | 5-year contract | Open to Rate Card and Eventually Fixed Fee Contract based on Milestones driving Predictability

COMMERCIAL MODEL STRUCTURE

FIXED PRICE

- Pricing is based on current per-tower volumes and applied on a monthly basis
- Baseline assumptions factor in current volumes, with the point of departure reflecting the current scope of work and the point of arrival based on monthly actuals derived from productive hours worked.
- Underwriting of Savings based on Base Camp 1.0 and Base Camp 2,0 initiatives.
- COLA has been bundled for a 5-year term.

VOLUME RULES

- **Volume floor:** A minimum utilization threshold of 85% of contracted FTEs . Partial credit mechanism will be invoked if deployment is below that.
- **Volume range** ±10% absorbed within base rate with no surcharge
- Volume >110% triggers surge rate (+8% per additional productive hour)
- Seasonal flex: ±10% pre-notified 60 days in advance at no surcharge
- **Volume reforecast window:** 90 days rolling
- **Force majeure provision**: shared risk above ±25% unforecasted volume swing

NEW SALES RULES

- New FIS clients added mid-contract: standard rate card applies from go-live date
- **New client ramp period (M1–M3):** 10% discount on new FTE billing while at <80% productivity
- New language premiums added via Change Request; rate card updated within 30 days
- New service types (outside 16 towers): bespoke rate agreed within 15 business days
- **New client onboarding cost:** one-time setup fee negotiated at contract award
- We will follow a non-linear cost model for any growth in business

CLIENT ATTRITION & DECONVERSION RULES

Scenario	Commercial Treatment	Mechanism	Outcome
Planned client exit (>180 days notice)	Wind-down at contracted rate; no early termination fee; WARN Act budget is FIS responsibility	**Transition Support**	30-day wind-down support at 50% rate
Unplanned client exit (30–180 days notice)	Early termination fee: 3 months contracted revenue for exiting client scope	**Minimum notice**	60-day minimum client notification required
FTE reduction due to attrition (<85% floor)	Volume credit mechanism activates; Cognizant adjusts headcount within 90 days	**Credit mechanism**	Partial credit applied to invoice
Client-driven constraint change (e.g. offshore approval withdrawn)	Repricing triggered within 30 days; uplift based on onshore rate differential	**Pricing amendment**	Change Request within 30 days
Contract early termination by FIS	12-month residual payment; recovery of un-amortized one-time investment ($37M over 5 years)	**Termination liability**	Pro-rata recovery of setup costs

Caselets for similar engagement and transformation journeys

- Leading provider of consumer, financial & property data, analytics & services company
- Leading American Bank Holding Company
- Global Stock Transfer Company
- Major Bank in US

 © 2026 Cognizant

Case Study 1: Engagement and Transformation Journey with a Leading Provider of Consumer, Financial & Property Data, Analytics & Services company

13+ Years
Multi-LoB Engagement

4,500+
Skilled associates across mortgage functions

80+
Processes spanning across mortgage & corporate functions

6
Multiple delivery locations across India

~$150B+
Engagement with Transaction Based Pricing (TBP) model

Functional Scope

- Data Acquisition and Product fulfilment
- Escrow and Tax Services
- F&A, Legal and Risk Assessment
- Mortgage underwriting & Loan Modification Support
- Valuation, Flood Reporting, Field Services

Complexities & Scale

- **Executed large-scale M&A-driven transitions** with successful rebadging, high offer acceptance, and post-integration operational stability.
- **Processes ~$92B+ annually** in escrow tax remittances across **20,000+ tax authorities**,
- Coverage involves **99%+ of US property records** across **3100+ counties and 5000+ data fields**
- Involved processing and extracting data from **~50Mn+ docs and 200Mn+ pages** annually.

How is Cognizant helping the client…

- **Seamless rebadging and post-acquisition stabilization**, ensuring uninterrupted delivery of mission-critical operations through integrated people, platforms, and controls.
- **Took over an 8-year-old mature low-cost canter and transformed operations** across service lines within 36 months through right-sizing and technology enablement.
- **Delivered transformation within strict end-client, regulatory, and platform constraints**, reducing costs while enabling a scalable platform for profitable growth.
- **Delivered 15+ technology and tool interventions and 8+ high-impact Six Sigma projects**, driving operational excellence and standardization.
- **Innovative deal structuring** with a robust ARC/RRC-based TBP model, including amortized payments of one-time technology and transition costs.
- **Vendor portfolio optimization** to de-risk dependency on Tier-2 vendors and proactively address known engagement risk factors.

Delivering Outcomes

Business Benefits

+35%
Efficiency GAINS delivered in first 3 years post acquisition

20 Mn+
Hard dollar benefits to client through Digital Transformation

100%
Regulatory Compliance & meticulous SLA adherence

Investments
Funded Innovation, Joint GTM initiatives, Transitions, Governance, Cost Amortization

 © 2026 Cognizant

Case Study 2: Engagement and Transformation Journey for a leading American Bank Holding Company

15+ Years
Multi-LoB Engagement

2800+
Skilled associates

84%
Offshore

5
Offshore Locations

Engagement Across Client Portfolio

Digital & Data Management	44%
Payment Services	16%
Wealth Mgmt., Security Services, Salesforce	10%

Functional Scope

- Credit and Debit Fraud
- Credit and Debit disputes
- Deposit Claims
- Enterprise claims underwriting
- Digital Marketing
- Currency threshold reporting
- Support services
- ACH Collection & claims
- Credit Bureau report

Complexities & Scale

- **High-volume, multi-product dispute operations** across credit, debit, prepaid, ACH, ATM, and merchant disputes
- **Complex and multi-transaction dispute scenarios**, requiring transaction-level investigation and recovery
- **Diverse fraud typologies** with varying evidence, rules, and adjudication requirements
- **Volume volatility and seasonality**, demanding rapid staffing scalability without SLA impact
- **Low denial rate and high approval leakage**, directly impacting financial losses
- **Strict regulatory, network, and PCI compliance requirements** in a highly regulated banking environment
- **Large-scale offshore delivery footprint** with the need for consistency, quality, and governance

How is Cognizant helping the client…

- **Redesigned the end-to-end dispute lifecycle**, standardizing processes, controls, and decision checkpoints to improve consistency and outcomes
- **Implemented multi-transaction disaggregation**, enabling targeted investigations and measurable reduction in write-offs
- **Established rigorous investigation and decisioning frameworks**, with complete case documentation and evidence-based adjudication
- **Leveraged LexisNexis and digital research tools**, strengthening fraud validation and improving denial accuracy
- **Applied Lean / PEX interventions**, reducing rework, improving quality, and driving sustained cost efficiencies
- **Deployed analytics-led governance**, with redefined KPIs, dashboards, and predictive SLA delivery to ensure transparency and zero KPI breaches

Delivering Outcomes

Business Benefits

From 24% to 31%
Improvement of denial rate through First-Time-Right (FTR)

From 50$ to 25$
Mitigated losses by reducing low $ write off thresholds

100%
Regulatory Compliance & meticulous SLA adherence

Cost savings
Through process optimization and Lean / PEX interventions

 © 2026 Cognizant

Case Study 3: Engagement and Transformation Journey with a Global Stock Transfer Company

23+ Years
Multi-LoB Engagement

530+
Skilled associates

Contact Channels
Inbound Calls
Outbound
Calls & Chats

Geographies Supported
USA, Canada and Australia

Locations : Philippines -
Pasig City, Taguig City

Functional Scope

- Transfers transactions
- Trade execution
- Escheatment
- Dividend reinvestments
- Tax reporting
- Proxy solicitation
- Account Maintenance

Complexities & Scale

- **High-touch, regulation-intensive transfer agency operations** across multiple lines of business
- **Multi-channel contact center at scale**, handling **~2M voice calls and ~190K chats annually**
- **Seasonal and event-driven volatility**, with workforce scaling from **~150 FTE (BAU) to 350+ FTE (peak)**
- **Transaction-heavy processes** spanning share transfers, trade execution, escheatment, tax, and proxy services
- **High-accuracy, risk-sensitive environment**, with direct impact on financial exposure, compliance, and investor trust

How is Cognizant helping the client…

- **Reduced inbound call volumes by ~20–25%** by implementing Self-Help capabilities and improving IVR containment
- **Enabled scalable, high-touch operations** to support regulation-intensive transfer agency services across multiple lines of business
- **Enabled data-driven CX improvements** through Speech Analytics to identify call drivers and experience gaps
- **Improved CSAT through targeted agent segmentation**, using speech-derived call behaviour metrics for focused coaching
- **Enhanced customer handling efficiency** by profiling customers into actionable categories for differentiated service strategies
- **Strengthened accuracy, risk, and compliance controls**, reducing operational errors and protecting financial and regulatory outcomes

Delivering Outcomes

Business Benefits

90%
Reduction in escheatment errors, impacting a working capital requirements by over **99%**

100%
Executive escalations reduced

99%
Reduction in financial losses due to Operational errors

99%
Fraud deduction errors reduced

3%
Efficiency and productivity improvement improved (on a baseline of 95%)

 © 2026 Cognizant

Case study 4: Technology Transformation Journey for a Major Bank in the US

5+ Years Transformation

8000+ Agents

24 Line of Business

6 IVR Applications

CCaaS Cloud Transformation

Problem Statement

- High TCO due to maintaining legacy systems
- Disjointed customer experience
- Roadblocks in enabling advanced digital functions with low speed to market
- Requirement to enable a front door experience with seamless backend integration
- Requirement to migrate from current legacy Avaya contact center solution
- Requirement to enable technical collaboration across multiple business units

Solution Summary

- Detailed due diligence exercise for understanding transformation and migration complexities and dependencies
- Application build using different languages in English, Spanish, French Canadian, Korean
- Build Conversational IVR using Lex V2 NLU
- Clinc integration for a couple of complex IVR applications
- Integrate with Pindrop Protect for Fraud Detection
- Integration with NICE IEX and NICE Nexidia solutions through Kinesis streams
- App chaining to enable the call transfers from AC to existing Avaya platform with screen pop
- Build a custom surveys and call disposition module

Delivering Outcomes

Business Benefits

$ 15Mn Cost Savings

77% Containment rate

77% Authentication rate

66% CSAT Score

~24% Improved transfer rate

Zero P1 Incidents
