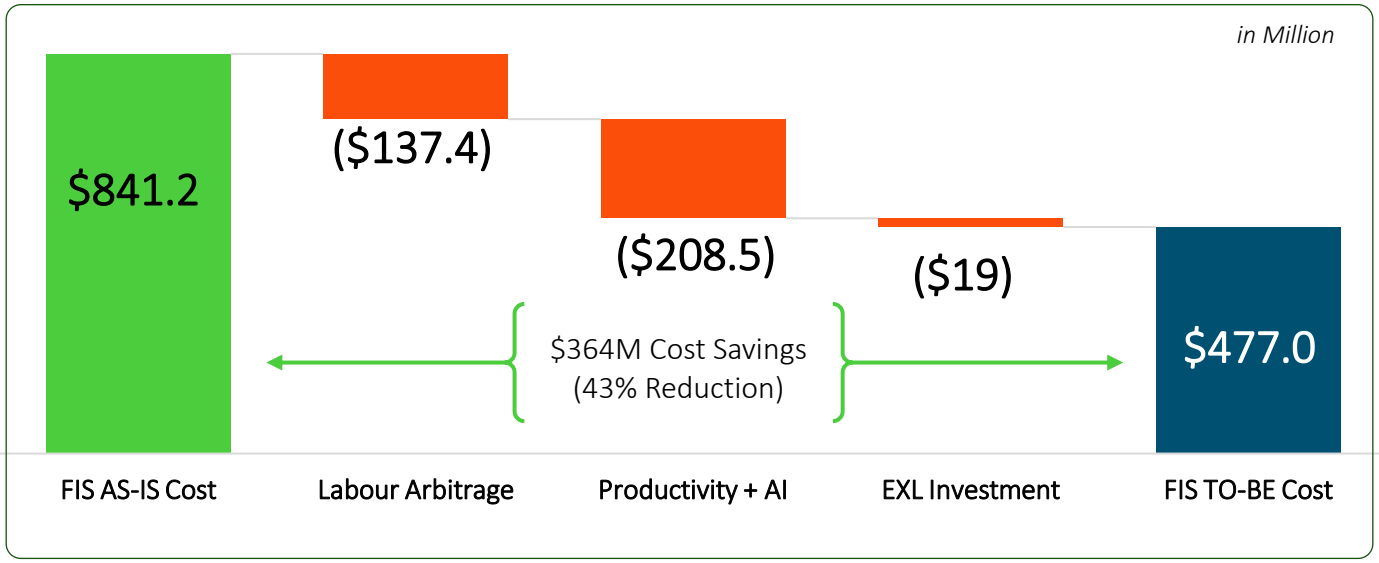
CHAPTER 3:

OUR COMMERCIAL PROPOSAL

Five-Year Commercial Proposal and Pro-Forma (Option 1)



- Commercials are indicative and will be refined through joint solutioning sessions
- EXL is open to structuring first-year costs to reduce FIS-side exposure and will discuss in next stages
- EXL's committed investments cover Program Management, dual-run transition costs, and 9 months of leadership oversight for the rebadged NA team
- Option 2 delivers 20-25%+ in cost savings than Option 1 - a decision worth pressure-testing during next stages[1]

in Million

	Year	Y1	Y2	Y3	Y4	Y5	Total
	EMEA As-Is Cost	$72.45	$72.45	$72.45	$72.45	$72.45	$362.25
	NA As-Is Cost	$95.80	$95.80	$95.80	$95.80	$95.80	$478.98
A	FIS As-Is Cost	$168.25	$168.25	$168.25	$168.25	$168.25	$841.23
	EMEA To-Be Cost	$94.34	$62.54	$51.62	$50.84	$50.84	$310.18
	NA To-Be Cost	$68.84	$27.40	$23.70	$23.44	$23.44	$166.82
B	EXL To-Be Base Cost	$163.18	$89.93	$75.32	$74.29	$74.29	$477.00
C	Benefits to FIS (A-B = C)	$5.07	$78.31	$92.92	$93.96	$93.96	$364.22

Above figures do not include any COLA / CPI linked increase for both AS-IS and TO-BE costs.

Please refer to Slide 12 for details of Target Operating Model (Option 1 and Option 2)

©2026 ExlService Holdings, Inc. All rights reserved.

Pricing Model and Commercial Rules

Volume fluctuation band

- Absorb ~10% volume variation; cover spikes with OT/buffer capacity
- Will maintain a bench of trained resources who can be deployed in production
- Monthly volume reconciled to forecast
- EXL's workforce management will support with regular staffing forecasts

New Client Onboarding

- EXL will leverage experience of client onboarding with similar FS clients
- Existing playbook to be leveraged
- EXL Transition Manager embedded with client ops from week one; single point of accountability
- Performance based SLAs with applicable Penalties for non-adherence

Client attrition

- EXL committed to providing reverse migration support including parallel run for business continuity
- MSA aligned to FIS contractual commitment to its client
- Support Knowledge management and retention support

Currency & Inflation protection

- Annual CPI-indexed price adjustment rates linked to a mutually agreed inflation index with a cap of 4% COLA adjustment clause
- Currency hedging commitment — EXL hedges INR/USD and GBP/USD exposure on a rolling 12-month forward basis; FX pass-through to client is capped at ±2% annually

FTE to outcome-based pricing

- EXL to explore the option of introducing new commercial construct – Migrate from FTE-based billing to TBP or outcome-based billing post process stabilization
- Expected time horizon around 18-24 months and tied to agreed KPIs
- Committed saves through Transformation interventions – roadmap aligned with FIS team

©2026 ExlService Holdings, Inc. All rights reserved.

Proposal Assumptions and Risk Considerations

	Location	Technology Assumptions	AI & Productivity assumptions
Assumptions	EXL has assumed consolidation of North America programs from its delivery centers in India across Delhi , Pune and Kochi. The EMEA programs will be retained in the market given the client constraints	• MPLS connectivity assumed for voice (single last mile for FIS US DC, dual for FIS EMEA DC); data/VDI traffic routed over internet. • EXL will leverage FIS-provisioned contact center stack and secure virtual desktop for agent access to CRM and LoB applications • EXL proposes extending one-time professional services and project management support to assist with the discovery, design, implementation, and user migration • All tools and systems will be provided by FIS • Decommissioning of legacy infrastructure is out of scope and will be managed by FIS • Migration planned over 12-14 months. After due diligence actual timelines will be confirmed • No major business process re-engineering and scope includes voice and chat channels only	• All solutions are assumed to be hosted within the unified FIS environment for NA & EMEA • FTE benefits and costs are based on our understanding of like-to-like processes; detailed process-level due diligence may lead to revisions in assumptions, costs, and benefits. • Costs and benefits are based on current FTEs and volumes, with process splits estimated; any changes post due diligence will directly impact outcomes. • Data and APIs connectors will be made available along with internal AI governance and compliance approvals • All platforms (AWS, NICE, Avaya, Pega, FIS, Microsoft CX stack) are assumed to be stable, available, and procured by FIS. • Solution will be deployed using a CoE-led model, leveraging FIS existing platforms (Microsoft Dynamics, NICE CXone for voice/chat) • FIS to provision LLM, STT/TTS/STS, and infra.; all LLM/token costs borne by the FIS

Risk considerations	Given the scale of the US program– EXL has considered a function-based split across multiple sites for natural BCP/DRP support
	
	EXL will also augment BCP/DRP plan for the EMEA rebadged employees with a Cluj and Sofia as additional locations to York
		• Dependency on telecom providers (DID/TFN) may impact migration timelines and cutover readiness.
		
		• Limited or delayed access to APIs may impact integration capability
		
		• Delay in providing Access to existing contact center platforms (Avaya, Verint, Genesys) and target cloud infra and relevant documentation/information for discovery and validation may impact migration timelines
			• Any change in the number of processes transitioned to EXL will have an impact on AI productivity benefits and timelines.
			• AI solution deployment and relevant benefit is subject to timely provisioning of required infra, system access, compliance and AI governance approvals
			• Factors impacting AI deployment and applicable benefits -
			  ○ Lack of / Delay in relevant infra access for development, testing and production
			  ○ Any code freeze or system unavailability impacting the implementation
			  ○ Increase / decrease in volumes due to system, regulatory, policy, process, etc. changes in the existing processes or addition of new processes
			  ○ No / late notification provided for any changes in system, workflow, policy, procedures, etc. and / or change in scope of this schedule resulting in de-scoping / re-scoping
			  ○ Lack of support or delayed support in implementation or validation of recommendations

How EXL can add more Value to your Client Portfolio?

fis | EXL

Our Relationship with FIS

We are already a trusted and embedded partner of FIS…

EXL's existing Analytics partnership with FIS is a key differentiator and unique springboard to value. It will accelerate transformation and allow us to infuse data and analytics across your in-scope areas.

HOW WE SUPPORT FIS

We are working closely with **CMO Org**

- Catalyzing Innovation
- Business Insights & Strategies
- Experimentation, Measurement & ROI
- Data Management, Enrichment & Monetization
- Enterprise Data Capabilities
- Advanced Analytics & Modeling (prospect)

KEY ENGAGEMENTS

Setup Foundation

- Voice of Customer
- MDP Architecture & Tech Stack Optimization

Lay the Platform

- **Enterprise Customer 360 build**
- Salesforce Tech Stack Migration
- MuleSoft Integrations

Advanced Analytics/BI

- Lead scoring and targeting strategy
- Revenue Marketing (Strategic Lead Management & Goal Setting)
- Strategic Insights, Measurement & Dashboarding

What advantages does it bring for the operations scope?

We're culturally aligned—our teams operate as your extended team, with FIS mindset, pace, and precision

- We deeply understand FIS data & AI ecosystem, positioning us well for future data and AI-led transformation
- The existing MSA and contractual frameworks remove onboarding friction
- Leveraging our deep understanding of FIS go-to-market prospecting strategy, along with our strong issuer domain expertise and broad client base, we are well-positioned to accelerate new client growth while delivering scalable, high-impact value-added services.

VALUE DELIVERED

2x	35%+	2x	80%	50%
Increase in NPS Survey Response	Duplicate records eliminated	Email deliverability	Workflow Automation for campaign management	Less Audience Leakage through robust consent, & bounce management

©2026 ExlService Holdings, Inc. All rights reserved.

Our existing capabilities and benchmark data complement FIS client services and we can unlock additional value for existing FIS clients and potential for prospects

RETAIN & DEEPEN — Existing FIS Clients

Reduce Fraud Losses

10-15%
Incremental Fraud Loss Reduction

Leveraging advanced AI/ML and NVIDIA-powered transformer models to reduce fraud losses, improve detection accuracy, and modernize FDS. Optimize customer experience and NPS through intelligent whitelisting and reduced friction in fraud controls

Increase NPS and Wallet Share

25%-30%
Spend Increase

Leveraging Early-tenure engagement strategies, cross-sell and upsell models, advanced attrition prediction models, campaign optimization, and intelligent contact strategies, supported by proactive customer management to grow spend and balances.

Better Collection Efficiency

10%-20%
Increase in collections

Persona-based outreach, optimized inventory management, complemented by agent upskilling and AI-driven payment prediction models. Accelerate recovery with digital collections and collection assist tools.

ACQUIRE & SCALE — New Client Growth for FIS

Accelerate Go-to-Market

20% +
Incremental Acquisitions

Leverage EXL's **existing relationships, competitive benchmarking, prospect scoring**, and vertical-specific analytics (e.g. credit union, community bank) to sharpen go-to-market and prioritize high-value prospects.

Sales & Solutioning Support

15-20% +
Faster Sales Cycle

EXL embeds in FIS sales cycles — building customized ops models, RFP content, and ROI business cases that help close mid-market banks, fintech's, and credit unions faster.

Bundled Ops + Value added services

30% +
Higher Conversion Rate

Offer managed services with value-added support early in the client relationship, driving new revenue and stronger client stickiness while lowering barriers for smaller FIs that can't invest in both independently.

Example: We have experience of 30+ fraud programs to help assess your client's E2E fraud ecosystem

1

– **We will conduct a holistic diagnostic across the entire fraud lifecycle:**
  - Upstream: Rules, models, strategies, decisioning logic, alert prioritization
  - Downstream: Fraud & dispute operations (front office + back office)

2

– **Our approach combines:**
  - Proven diagnostic frameworks and toolkits
  - Benchmarking data across 30+ banks / FIs
  - Deep expertise across analytics, strategy, and operations

3

– **Results you can expect:**
  - Assessment map of current maturity of bank's analytics/processes/technologies
  - Benchmarking against local & global banks
  - Key interventions that can be undertaken

Sneak peak into benchmarking

Illustrative

Portfolio Level	
Gross Fraud Loss	5-7 bps
Net Fraud Loss	4-6 bps

Upstream Models & Rules	
Strategy Refresh Cycle	Quarterly - Half-Yearly
False Positive Rate (Cards)	< 3:1
Precision / Recall	> 0.7 / >0.7
Model AUC	> 85%

Fraud Voice Ops	
AHT	4-6 min
ASA	35-45 sec
CSAT	> 85%
Aban %	< 2%

Dispute BackOffice	
AHT	13-15 min
Quality %	< 99%
Reg errors%	< 1%
Time to refund	< 1 day

Client Migration Responsibilities

Client Migration Responsibilities

Objective is to enable single-point accountability, ensure consistent and risk-controlled delivery, and provide scalable, transparent operations - allowing clients to focus on core business outcomes.

Area	FIS	FIS Client's	EXL
Governance & Oversight	Own end-to-end service governance, control framework, and performance oversight	Participate in governance with FIS	Adhere to governance structure; follow escalation protocols
Client Relationship Management	Primary interface with clients; manage expectations, SLAs, and escalations	Define business requirements, priorities, and success criteria	No direct ownership; engage with FIS only
Scope & SLA Definition	Define scope, SLAs, KPIs, and service standards	Validate scope, agree on SLAs with FIS	Align delivery to defined SLAs and contractual scope
Solutioning & Operating Model	Design delivery model, multi-client structure, and capacity strategy	Provide input on business needs and constraints	Support feasibility; align execution model to design
Process Ownership	Own process design, standardization, and continuous improvement	Provide process inputs, policies, and regulatory requirements	Execute processes as per defined SOPs
Transition & Knowledge Transfer	Lead transition, KT, readiness certification, and go-live		Participate in KT; ensure team readiness
Delivery & Execution	Accountable for end-to-end service delivery and outcomes	Monitor outputs against SLAs and business outcomes	Execute assigned work volumes within SLAs
Workforce & Capacity Planning	Overall demand planning, capacity governance, and ramp strategy	Provide volume forecasts and demand signals	Manage staffing, scheduling, and attrition within scope
Quality & Compliance	Define QA frameworks, controls, audit readiness	Ensure regulatory alignment and compliance requirements	Adhere to QA standards; support audits and controls
Technology & Infrastructure	Provide/enable systems, access, and integrations		Maintain required infrastructure and access compliance
Reporting & Performance Management	Drive reporting, insights, and governance cadence		Provide timely data, highlight risks, EWS insights, and escalate issues
Risk Management	Own risk identification, mitigation, and escalation	Highlight business risks and dependencies	Proactively flag operational risks and support mitigation

Technology Migration

We have crafted a strategy to migrate foundational CCaaS without operational disruption

M0 — M1 — M2 — M3 — M4 — M5 — M6 — M7 — M8 — M9 — M10 — M11 — M12

1 Current state discovery

- Discovery workshops – Operations & Technology
- Create Flying Formation
- Establish PMO & Governance Board
- Access & Procurement of Licenses & Infra
- BOM/ SOW Sign-off
- Future State Architecture & Migration Plan
- Risk & Compliance Approval
- Data Gathering
- As-Is Journey mapping
- To-Be Solution Journeys
- AI - Governance Framework

SOLUTIONS INSCOPE

2 Cloud infra readiness / CCaaS Platform base install

Base Install
- Network readiness
- Prod, DR, Dev. Instance setup (NICE InContact)
- AD integration (SSO)

3 Integration & Contact center Configuration

Integrations
- CRM, Conversational IVR, Lumen(PSTN) and 3rd party App.

Contact Center configuration
- Roles & User config. || Skill, Agent config and Mapping
- Call flow replication
- Recording, QM and WFM ||Reporting
- System testing (Technical, Functional)

Validation
- Business UAT | Sign-Off

4 Validation

5 Agent Migration to NICE CXone

User Migration (To be rolled out client by client)
- We understand that TSYS has multiple clients across NA and EMEA, including dedicated and shared setups
- We will work in collaboration with TSYS and FIS to identify and map TFNs/DIDs with corresponding clients, flows and skills
- Migration will progress from low- to high-complexity workloads, with rollback plans to minimize risk
- The migration will be executed in multiple sprints over a four-month period

User Migration in Sprints Prioritizing as per LOBs & Regions
- NA - EMEA

On-Going Support

6 Hypercare

©2026 ExlService Holdings, Inc. All rights reserved.

Technology Migration Responsibilities

Task / Deliverable	EXL Responsibilities	Support needed from FIS
Discovery / Current State Analysis	• Document the current-state contact center environment, including architecture, platforms, and operational setup • Review the various solution modules and define their respective roles within the contact center ecosystem • Analyze existing integrations and the business use cases they support • Assess contact center–specific configurations and map them to respective FIS clients and lines of business	• Provide existing technical and business documentation, including HLD, LLD, DID/TFN inventory, number-to-call-flow mapping, and skill definitions • Provide access to the current contact center voice infrastructure for validation and discovery activities.
Future State Solution Design	• Develop a High-Level Design (HLD) for the target-state solution, outlining key solution components and associated integrations • Clearly define the in-scope and out-of-scope elements for the proposed solution	• Conduct multi-domain reviews and provide timely stakeholder approvals for the solution design prior to implementation
Base Setup	• Provision NICE CXone instances (Production, DR, and Development) for North America and EMEA regions • Integrate NICE CXone with Active Directory to enable Single Sign-On (SSO) • Validate and ensure network readiness to support all required platform integrations and access requirements	• Provide access to FIS cloud infrastructure with the necessary permissions for configuration and validation • Provide SME support for Active Directory integration and configuration • Provide SME support for network setup, connectivity, and troubleshooting
Integration & Configuration	• Integrate NICE CXone instances with Conversational IVR, PSTN (Lumen Cloud), CRM, and other relevant third-party applications • Implement contact center–specific configurations, including contact flows, skills, queues, and agent assignments • Conduct technical and functional testing using test DIDs/TFNs and representative dummy data to validate end-to-end operations.	• Provide access to required APIs and SMEs to enable and validate integrations • Provide representative test data to support integration and functional testing scenarios
Testing & Validation Getting ready for Migration	• Collaborate iteratively with business teams to incorporate feedback on workflows and configurations • Work with FIS to define migration sprints based on clients, lines of business, and complexity levels • Develop Standard Operating Procedures (SOPs) for new cloud-native tools and processes	• Business teams to perform end-to-end functional testing and provide structured feedback • Facilitate go-live approvals, coordinate migration sprints, and provide support for any required changes on user desktops.
User Migration	• Collaborate with the Operations team to execute user migration from Avaya to NICE CXone according to the defined migration sprints • Develop and maintain rollback plans to mitigate risks during migration activities	• Coordinate with the PSTN provider to support number (DID/TFN) porting and routing readiness • Provide test users to validate migration and end-to-end functionality • Ensure hypercare support from Network and Systems teams is available during and immediately after the cutover

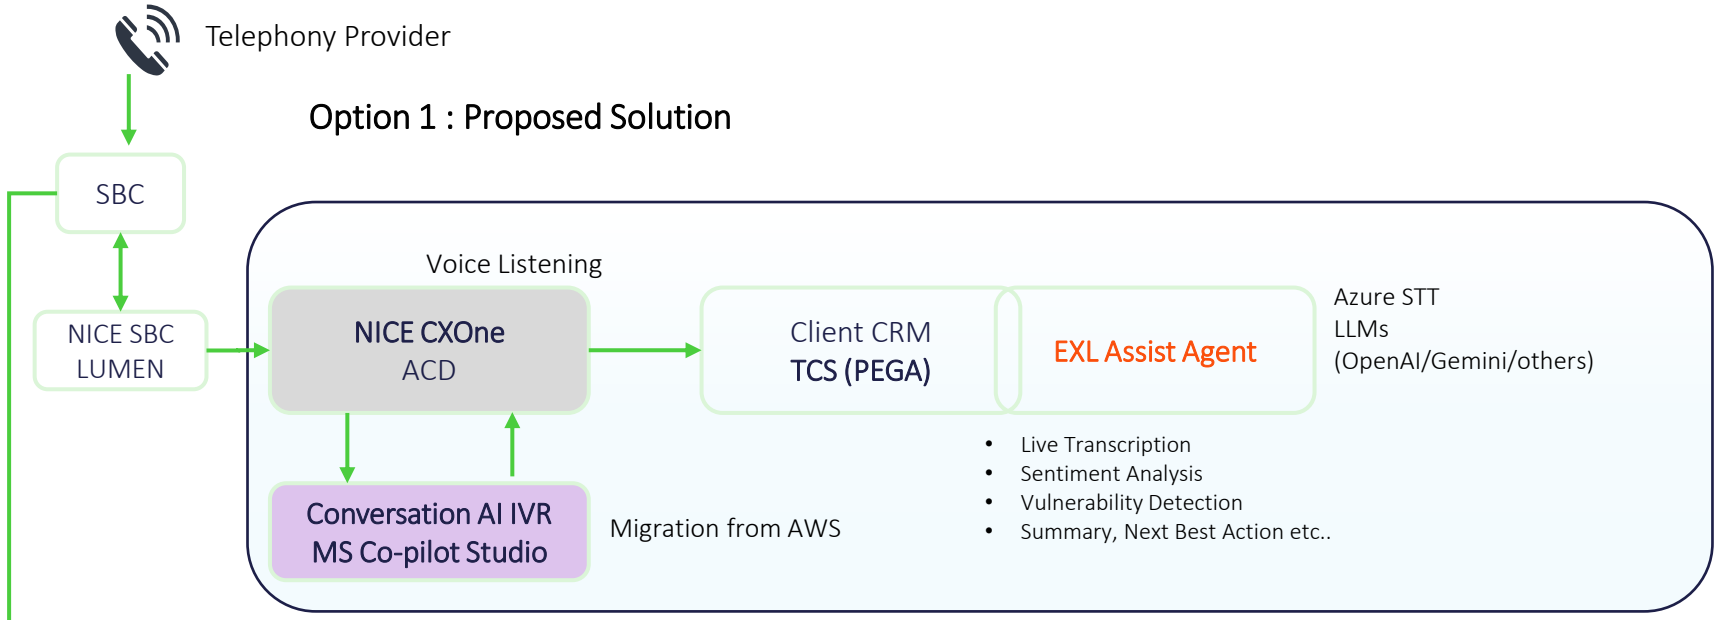
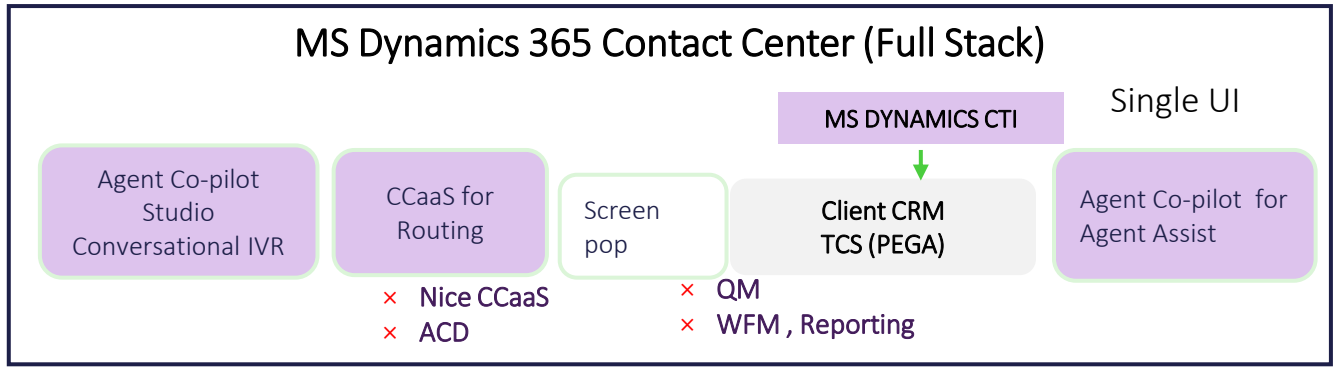
AI Overlay

Our 'Go-To' Tech Architecture for Migration and enabling AI Agents for FIS considering Cost & Time to transition



Approach

- NICE CXONE for telephony and not routing
- MS Co-Pilot for Conversational AI followed by Agent transfer for unresolved queries
- Maximizing TCS(PEGA) Stack
- Assist Agent (On PEGA UI)

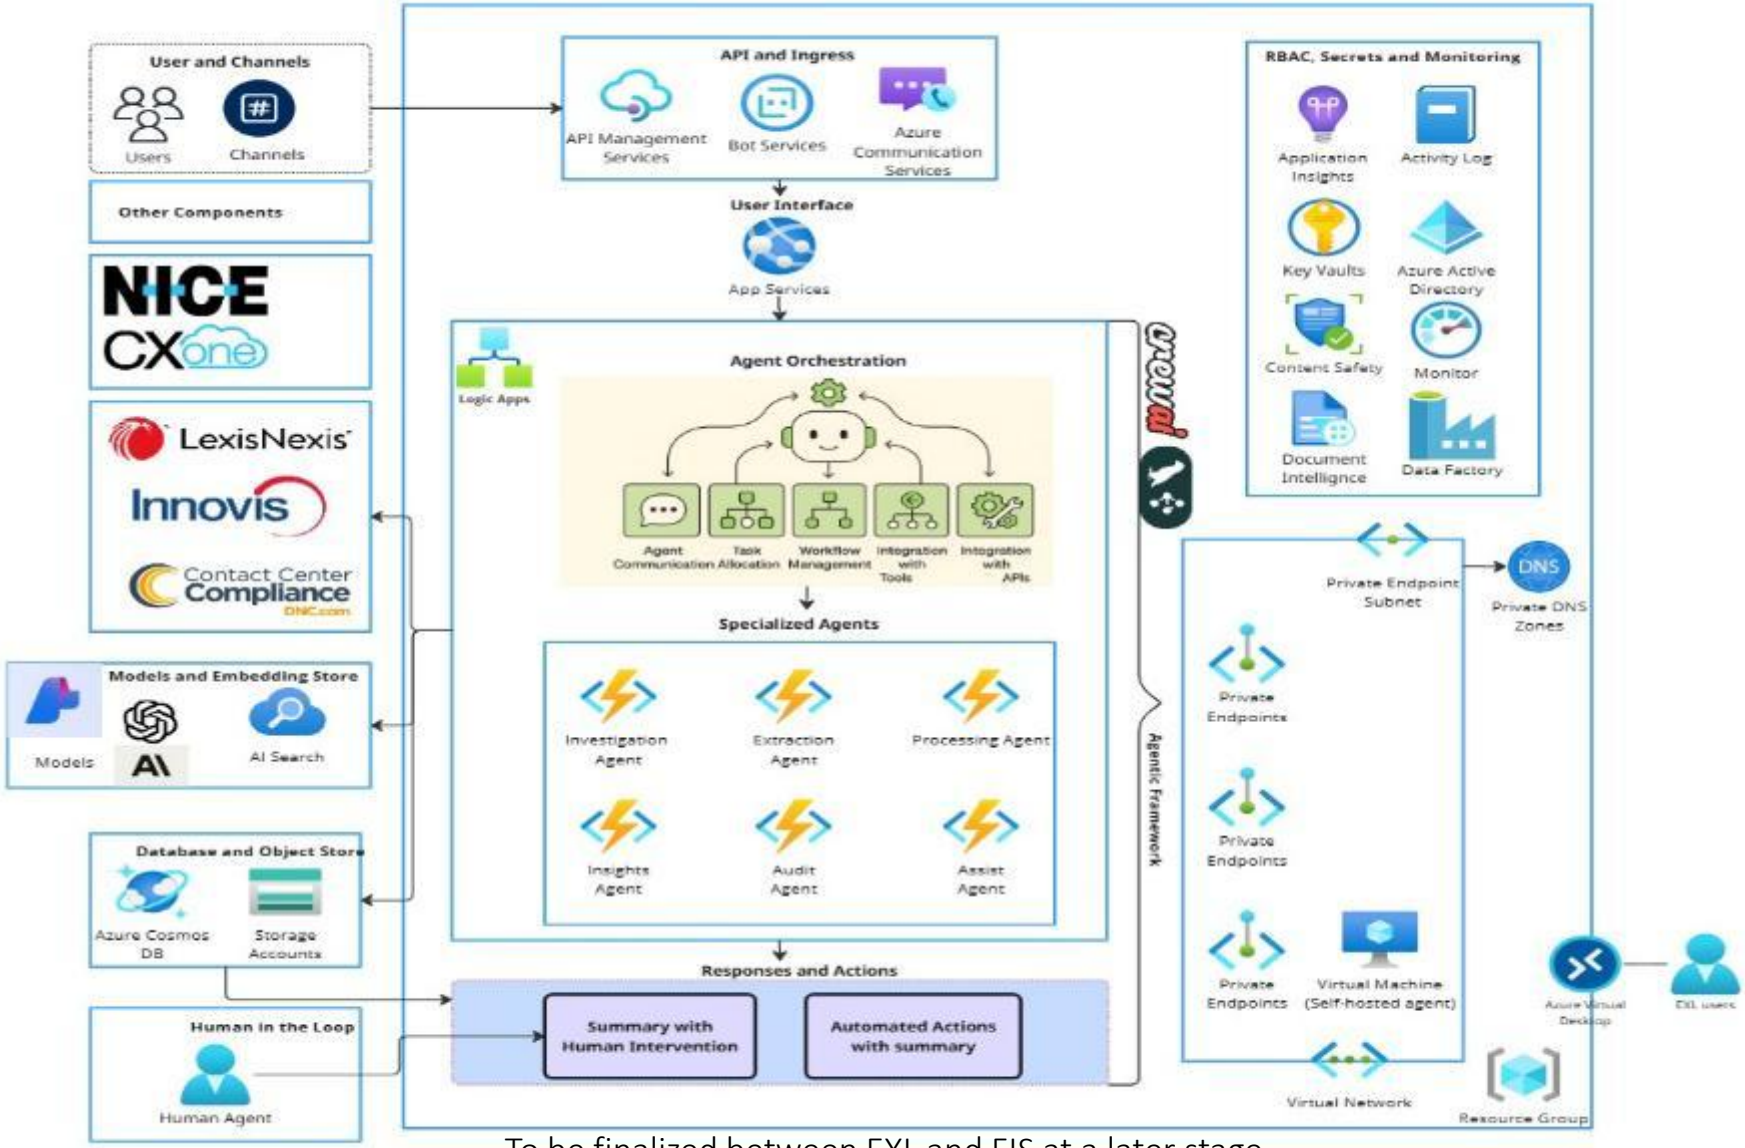


Approach

- Transitioning to MS Dynamics for end-to-end services (Intent Identification, Resolution & Routing)
- D365 Agent Assist and TCS (PEGA) integration

©2026 ExlService Holdings, Inc. All rights reserved.

Directional - High Level Technical Diagram



To be finalized between EXL and FIS at a later stage

AI Overlay – Reimagined Journey for End Customers

As-Is customer journey for disputes

Customer:
Sarah

Relationship:
Retail banking Customer

Sarah, an FIS end consumer, raises a dispute due to a billing error in which she is incorrectly charged for services, prompting her to contact the customer care to raise a dispute

Customer raises a dispute via multiple channels (email, call, portal, fax, paper mail)

Agent manually reviews the dispute request and creates a case in the dispute management or CRM system by frontline agent

Frontline Agent validates customer identity and verifies transaction details using internal systems

Frontline Agent check the dispute for mandatory details (amount, date, transaction ID, dispute reason) and eligibility as per policy

Frontline Agent categorizes the dispute(e.g., fraud, billing error, service issue) and assigns a reason code.

Supporting documents are collected from internal systems, merchants or customer by a back-office agent.

Frontline Agent routes the case to appropriate specialist back-office queue

Back-office agent conducts analysis and determines whether to uphold or reject the dispute

Decisions requiring approval are escalated; financial adjustments or chargebacks are processed by Back-office agent

Customer is informed of the outcome - dispute closed, or reopened if additional action is required

Challenges

- Multiple Handoffs
- High Agent Dependency
- High Handling Time
- Manual data entry
- Low CSAT score

©2026 ExlService Holdings, Inc. All rights reserved.

Reimagined Agentic AI enabled customer journey for disputes

Customer:
Sarah

Relationship:
Retail banking Customer

Sarah is an end consumer of FIS whose transaction has failed at POS but her card has been debited. Sarah is very upset and reaches out to the dedicated customer care number for disputing the transaction

- **Interaction Agent (Powered by Tranform.CX)**
- **Extraction Agent (Powered by EXL Xtrakto.AI™)**
- **Assist Agent (Powered by EXL smartAgentAssist.AI)**
- **Processing Agent (enabled by EXL iBOT.AI**
- **Audit Agent (Enabled by SmartAudit.AI)**

Interaction Agent performs seamless ID&V on call, detects dispute intent and captures key details to initiate dispute journey. Supporting document submission link provided.

On Sarah's request the Interaction agent routes her call to a human agent **Interaction Agent** provides complete case context upfront (no re-explanation needed)

Assist Agent helps human in loop by generating real-time transcripts and live sentiment and dispute risk analysis. AI-driven next best actions are provided with SOP adherence maintained.

The case moves to Backoffice. **Extraction Agent** aggregates E2E dispute context across systems, including current alert and supporting documents, transaction patterns, merchant details, historical disputes and compromise indicators

Assist Agent identifies key dispute risk drivers (friendly fraud, card compromise etc.) and provides AI-led recommendation on dispute validity (accept / reject).

Processing Agent auto-generates structured dispute case documentation that has decision rationale, actions taken, and supporting evidence.

Processing Agent converts provisional credit to permanent credit, triggers customer communication and tags disputes for root-cause analysis and strategy feedback loop

Audit Agent performs automated QA, identifying process gaps, quality deviations. Delivers targeted feedback and coaching insights.

Impact ↑ Improved Recoveries 5-10% ↓ Cost to Serve ↑ Dispute Win Rate ↑ CSAT %

©2026 ExlService Holdings, Inc. All rights reserved.

As-Is customer journey for Fraud

Customer:
Robert

Relationship:
Retail banking Customer

Liam is a fraud Backoffice analyst who has received an alert for high-velocity card not present fraud on Robert, an end consumer of FIS.

Fraud alerts are generated from existing monitoring systems or customer-reported incidents

Fraud analyst opens a case and reviews basic alert information

Fraud analyst manually gathers case information across multiple systems including:
- Alert details and transaction history
- Customer profile
- Device usage information
- Login activity and network indicators

The fraud analyst analyzes the collected information to identify fraud indicators across
- Behavioral patterns
- Identity-related anomalies

Based on analysis, the analyst classifies the case as fraud or non-fraud

Fraud analyst manually prepares structured investigation documentation, capturing
Final decision
- Supporting rationale Actions taken

Analyst or operations team
- Closes the investigation case
- Blocks the impacted card or account where required
Initiates card re-issuance as per standard procedures

QA team conducts review
- SOP adherence
- Accuracy of decisioning
- Documentation completeness

Challenges

- Multiple Handoffs
- High Agent Dependency
- High Handling Time
- Manual data entry
- Low CSAT score

©2026 ExlService Holdings, Inc. All rights reserved.

Reimagined Agentic AI enabled customer journey for Fraud back office

Customer:
Robert

Relationship:
Retail banking Customer

Liam is a fraud Backoffice analyst who has received an alert for high-velocity card not present fraud on Robert, an end consumer of FIS.

Extraction Agent
Extracts and create summary from document

Assist Agent
For Next best actions

Processing Agent
For downstream processing

Audit Agent
Automated audit and bespoke feedback generation

Extraction Agent aggregates complete case context across systems including- alert details and transaction patterns; customer profile and account changes; device, login and network signals.

Assist Agent identifies top fraud risk drivers across behavioral, identity, and device dimensions and provides AI recommendation (fraud / non-fraud classification with rationale). Ensures there is SOP adherence and guided decisioning.

Processing Agent closes case blocks, triggers card re-issue and customer notification. It also feeds outcomes into continuous strategy and model refinement loop

Processing Agent auto-generates structured investigation summaries that have decision rationale, actions taken, and supporting evidence

Audit Agent performs automated QA, identifying process gaps, quality deviations. Delivers targeted feedback and coaching insights.

Impact ↑ 40%-45% productivity ↓ Cost to Serve ↑ Fraud loss reduction of 5-15%

Brilliant @ Basics framework

Brilliant@basics

Brilliant@basics means expert, integrated, tightly governed and compliant management of your operations.

Performance & SLA Management

Performance management driving great CX

- Tailored coaching and training need identification
- Bottom Quartile Management to reduce agent variation

Proactive QA and compliance

- Robust quality methodology based on Lean Six Sigma principles
- Adherence and monitoring of FIS's compliance requirements

Rigorous management of SLAs

- Real-time visibility into SLA performance
- RCA for missing KPIs / SLAs
- Robust automated reporting and insights

Continuous Improvement & Knowledge Mgmt.

Continuous, data-led evolution

- Reduction in waste (handoffs, transfer reduction, NVA reduction, Building synergy between front & back-office etc.)
- Ground-up Ideas through "All Idea Matters"

A great, ongoing learning experience

- Customized training program delivered by EXL Banking, CX and Analytics Academy

Respect for knowledge

- Detailed standard operating procedures periodically signed off by FIS for up-to-date operational procedures

WFM & Resource Management

WFM gives you certainty and scalability

- Partnering with FIS in planning, staffing & scheduling
- Real-time monitoring of queues

The resources that you need, when you need them

- Ramp up / ramp down to cater to your requirements / manage peaks
- Backfill planning through capacity planning and analysis of historical attrition trend

The versatile workforce that you need

- Cross-skilling based on work-type & functional adjacency
- Support during peak periods, shortages & cross-skilling across complex processes

Smart Governance

Engaged, motivated, capable and loyal team

Best-in-class client experience

Excellence in delivery

Cost effective & scalable operating model

©2026 ExlService Holdings, Inc. All rights reserved.
