Contents of Submission: Response Guide

IBM is pleased to offer our proposal in response to Fidelity Information Services' Managed Services Partnership RFP. Our submission is in four parts: (1) IBM editable proposal in PowerPoint, (2) IBM proposal in PDF, (3) IBM editable Pricing Schedules in Excel, and (4) IBM Redlined SOW.

For our proposal, we followed the topics provided in your *Submission Detail*. For easier readability and referenceability, we have grouped similar details. For example, Client Migration includes the Waves Approach, the Current Location to Future Location Mapping for End-State, the Integrated Transition Plan, and the Activities Responsibilities Matrix details.

Executive Summary

IBM's Executive Commitment to FIS

Thank you for the opportunity to submit IBM's proposal to partner with FIS in transforming Total Issuing Managed Services (TMS). IBM is prepared to assume end-to-end accountability for Contact Center, Risk Mitigation, and Back Office operations—supporting TMS as a value-generating business while delivering sustained cost reduction, improved client experience, and scalable growth over the five-year term.

Our proposal is purpose-built for the scale and regulatory rigor of TMS: a multi-region, multi-language operating environment across North America and EMEA. IBM brings proven experience transitioning large, incumbent operations while protecting service levels, regulatory compliance, and client experience throughout migration.

IBM's commitment to FIS is anchored in three core principles:

Operational Excellence with De-Risked Transition

- Phased, **client-consented migration** aligned to contractual and regulatory requirements
- Structured **knowledge transfer** and dual-run execution with no SLA degradation
- **Simplified, resilient global delivery model** with financial-services-grade governance

Technology-driven Efficiency through AI and Automation

- **AI-first, asset-centric delivery model** leveraging specialized IBM AI assets and IBM Research products
- Shift from legacy IVR and manual processes to **AI-enabled agent assist** and **automated workflows**
- Measurable **productivity and experience** improvements aligned to FIS platform standards

Financial and Strategic Value with Aligned Incentives

- **Immediate and sustained cost reduction** through delivery optimization and automation
- **Transparent, auditable** commercial assumptions
- Fees at risk against **outcomes**, with gain-share beyond baseline commitments

IBM's approach is not lift-and-shift outsourcing, but a deliberate transformation of how TMS delivers services—protecting clients through transition while positioning FIS for long-term efficiency and growth.

IBM looks forward to partnering with FIS to deliver a secure, modernized, and future-ready TMS operating model.

Ashish Thakur
IBM Consulting Partner for FIS

John Scott
IBM Managing Director for FIS

Metrics–Based Skin in the Game

IBM aligns commercial outcomes to measurable performance improvements, with fees at risk against AI adoption, productivity gains, and workforce objectives

Asset-Centric Transformation at Scale

IBM embeds proven assets and accelerators directly into operations, reducing execution risk and accelerating time to value at enterprise scale

Simplified Global Operating Model

IBM delivers a standardized global model that improves resilience, scalability, and regulatory control across regions and languages

New Revenue Streams

IBM enables new revenue opportunities through differentiated, AI-enabled services that support your expansion without linear cost growth

Solution Snapshot

A multi-agent, AI layer fronts interactions, resolves complex workflows, and orchestrates across systems is paired with NICE CXone and a rebalanced global workforce to simplify delivery and reduce cost.

$234M
Total OpEx Savings Delivered (5 Yrs)

Up to **80%**
Total Interaction Deflection

Up to **30%**
Total Productivity Enhancements

1. Agentic AI Front Layer
Multi-agent AI orchestrates workflows, data, and channels
Agent assist accelerates human resolution

2. CCaaS and Enterprise Integration
NICE CXone for routing, workforce management, and analytics
Integrated into client CRM and servicing systems

3. Workflow Automation at Scale
Agentic workflows execute tasks such as fraud and disputes
Fewer handoffs and faster resolution
Consistent execution across channels

4. Workforce Transformation
Transition approximately 2.7 thousand workforce
Approximately 30 percent reduction through automation
Shift to higher-value exception handling

5. Global Delivery Optimization
North America supported by Philippines and India
EMEA retains United Kingdom presence with Krakow nearshore

5 Year Transformation Rollout

Commercial Proposal

Commercial Proposal with 5-year Pro-forma

IBM is proposing a **$460M** solution over 5 Years; Fixed Fee flexible model

Key Commercial Highlights:

- **$234M** OPEX Reduction
- **Self Funding** in Y1
- **48%** Reduction in Run-Rate Annual Spend by Y5
- IBM invests **$11.3M**
  - AI Accelerators
  - SMEs: AI, Automation, Process, Data Scientists
  - Knowledge Ctr & Advisory Council
- AI interactions charge on per transaction pricing
- Open to UK Facility Take over
- Identify and drive **new revenue streams**

Business Case - $M[1, 3, 4]	2026 (5)	2027	2028	2029	2030	2031 (7)	Total[4]	North America	EMEA
Total Current State Baseline[1]	**$63**	**$152**	**$152**	**$152**	**$152**	**$89**	**$759**	**$391**	**$368**
In-Scope IBM Addressable Base Case[1]	**$63**	**$152**	**$152**	**$152**	**$152**	**$89**	**$759**	**$391**	**$368**
IBM Price (BPO Steady State Operations)	$4	$102	$114	$95	$84	$46	**$445**	$157	$288
FIS Retained Cost of Resources During Transition	$55	$26					$80	$43	$37
FIS OPEX Savings	**$5**	**$24**	**$38**	**$57**	**$68**	**$42**	**$234**	**$191**	**$43**
OPEX Percentage savings on Base Case	**8%**	**16%**	**25%**	**37%**	**44%**	**48%**	**31%**	**49%**	**12%**
IBM Price (Transition) - possible CAPEX[2]	$3	$12					**$15**	$8	$7
FIS Net Savings							**$219**	**$183**	**$36**

Notes:

[1] Baseline uses 2025 actual operating expense provided. Additional due diligence is needed to finalize.
[2] Transition charges are paid as incurred. Recommend checking with Corporate Accounting for amortization of Transition charges to accelerate Y1 savings.
[3] COLA not included
[4] Assumed start date is August 1, 2026.

The estimate quoted in this document is derived from preliminary requirements provided by the client. The estimate does not constitute a commitment or offer by IBM. A more detailed study of the client's current operations and requirements is needed before a formal price can be released. Once said study has been carried out, a formal proposal will be prepared at the client's request. That price may be higher or lower than the estimate presented here. The contents of this response shall not be disclosed outside FIS and shall not be duplicated, used or disclosed in whole or in part for any purpose other than to evaluate the estimate.

For additional information, please refer to pages 34/35: Assumptions for Pricing Model

Client Migration

Client Migration Waves Approach

Overall Transition Design considerations

Aligned with FIS requirements

- **Accelerated and prioritized Go-live schedule:** Aligned to accelerate speed to value.
- **Customized and dynamic Transition Plan:** New resource onboarding and training to dynamically fit with complexity profile of Services, client specific nuances as well as FIS client context (renewal aligned or pre-sequenced wave approach)
- **UK Center takeover:** IBM will rehire the existing FIS staff in UK

Digital Technology & scalable Knowledge Management

- **Cobee.AI**– Enhance documentation with agility, drive insights, governance
- **Establish Center of Excellence (CoE) for 3 Services: Customer Service | Risk | Backoffice.** Develop Electronic, Scalable, Classroom / Self Study training curriculum which will be self improving using IBM's Knowledge Management Platform and expertise.
- **Integration with Transformation & New tools**: IBM transition will integrate and align with its rollout of new technology and tools to modernize operations.

Region specific & Expert-Led Wave Design & Governance

- **IBM SMEs & Global Transition teams** to lead design workshops and embed best practices in future-state processes
- **Efficient Region-specific KT strategy:** For NA, transition by Client Clusters. For EMEA, transition by Service Clusters
- Utilize recordings and Cobee outputs to minimize repetitive training

Structured Risk Mitigation Approach

- Staggered model – to ensure **minimal disruption and impact,** phased handover, milestone control
- **Tollgate Approach:** Minimize disruption using verified **checkpoints and toll gates**
- **Rehire staff in UK & Philippines:** Infuse existing talent and operational know-how early and quickly.

NA / Canada Wave strategy

- Transition by Client Clusters to minimize change management & communication related to each client
- IBM will hire and onboard staff across all three services that will begin the Knowledge transfer based on prioritized clients
- During initial workshops, IBM & FIS will jointly agree on the client prioritization criteria while also considering the renewal related nuances
- Digital technology (Cobee) will be utilized to create content for various Services. This will include classroom modules, Self serve materials as well as content for deep exceptions-based trainings

EMEA Wave strategy

- For UK, we will be taking over the current staff and operations. IBM will provide training for integration of FIS staff into IBM as well as access to ongoing learning.
- For German scope, given large number of staff supporting Services, we will transition in Service Clusters
- For Dutch scope, we will transition by clusters to minimize change management & communication related to each client

Workforce Rebadging

Workforce Rebadging Proposal – Cocreating Together for Success

- IBM proposal to take-over 962 FTE's in UK and Philippines
- UK FTE and facility take-over for accelerated transition to IBM within 6 months
- Co-create and co-design the rebadge roadmap with FIS UK leadership for a seamless transition
- Ensure TUPE compliance by working timely and closely with FIS UK Leadership
- Comprehensive Consultation strategy to ensure employee communication and compliance

Locations	FTE	Target Service Location
Milton Keynes	838	IBM proposal of FIS facility take over in UK
Coventry		
Manila	124	IBM Manila location

Compliance with all relevant labor and employment regulations. (TUPE / ARD)

Safeguarding benefits to ensure no employee is worse off due to the transfer.

Service continuity, ensuring smooth and uninterrupted support.

Transparent engagement with employee representatives in TUPE/ARD countries.

High acceptance rates (90%+) through competitive, comparative offers in non-ARD countries.

Visible HR support, including employee clinics, roundtables, and Q&A sessions.

IBM has received global recognition as an Employer of Choice in these geographies:

2024 Asia CEO Awards; Top Employer of the Year

2025 SSON Asia Impact Award; Gold Service Provider of the Year

2025 Forbes; Top 10 Best Places to Work Award

2026 Forbes; Best Management Consulting Firms

For additional information, please refer to page 31: TUPE Journey

©2026 FIS + IBM CONFIDENTIAL

Workforce Rebadging Timing & Sequencing – IBM's 4 stage process

We will rebadge employees in the UK by Month 6, and Philippines by Month 3, which includes meeting local regulatory requirements.

	Stage 1 **Consulting**	Stage 2 **Orientation**	Stage 3 **Development**	Stage 4 **Integration**
Primary Focus	Assessment and design	Transition and communication	Onboarding and enablement	Long-term alignment
Key Activities	Workforce analysis, role alignment, impact assessment, terms design	Joint communications, IBM introduction, Q&A, HR support, offers	Onboarding programs, HR/IT access, IBM tools, guided support	Goal setting, learning platforms, coaching, career planning
Executive Value	Risk reduction and informed decision-making	Trust, clarity, and employee confidence	Faster productivity and smoother adoption	Engagement, retention, and sustainable performance

Our Capabilities

- Dedicated IBM HR team to transfer FIS staff
- Specific expertise in TUPE, HR transition management, employee integration and cultural alignment
- Supporting inbound and outbound deals

Our Experience

Bringing people in UK via TUPE for **30+** Years

2,500 People transfers since 2020 in UKI

High ratings On post-transition employee surveys

Co-design pragmatic HR solutions specific to each situation — **25+** UK deals a year

AI Overlay Technologies

List of AI Overlay Technologies along with relevant impact metrics

IBM has a broad suite of enterprise assets and AI technologies available.
IBM would welcome the opportunity to demo, showcase, and discuss use case application of these technologies.

Technology	Primary Value Lever	Impact Metrics
Cobee Pro	Productivity	Accelerated Transition: Rapid definition current state SOPs and creation of agent training or certification materials, from months to weeks
Klarity	Productivity	FTE Reduction: Reduced reporting and tracking effort required
Procedure Eater	Productivity	Accelerated Transition and Execution: Enables rapid analysis of current documentation, identification of opportunities, and generation of inputs for creation and training of agentic workflows
IBM Consulting Advantage (ICA)	Productivity	Accelerated Transition and Execution
NICE CXONE	Productivity	Automating routine tasks reduces staffing needs and allows agents to focus on complex issues. While reducing average handle time and boosting overall efficiency.
Multi-Agent Conversational AI	Productivity	Contact Elimination

For additional information, please refer to page 32: AI Agent Asset Repository

Regulatory Requirements & Vendor Certifications

List of Relevant Regulatory Requirements and Vendor Certifications & Experience Against Each

FIS will benefit from direct access to Promontory, IBM's regulatory advisory firm of former regulators and subject matter experts.

Promontory brings deep, practical experience interpreting regulatory expectations, engaging with supervisors, and operationalizing compliance across complex financial institutions. This expertise strengthens our ability to align regulatory requirements with actionable controls, evidence, and implementation approaches — helping you meet supervisory expectations with confidence.

US

Although FIS is not directly regulated by the FRB, there are broad, industry expectations that FIS is required to comply with on behalf of clients, including but not limited to the following. These pertain to outsourcing and offshoring, as well as data privacy.

- Data Protection and Customer Information – GLBA and Safeguards Rule
- Third Party Risk Management (FRB SR 23-4)
- Federal and state labor requirements, including the Fair Labor Standards Act (FLSA), Family and Medical Leave Act (FMLA), and applicable state wage-and-hour laws.

UK

- Data protection compliance with UK GDPR and the Data Protection Act 2018.
- Compliance with PCI-DSS if handling payments.
- If carrying out regulated financial services on behalf of clients, possible Financial Conduct Authority (FCA) rules may will apply.
- Registration with the Information Commissioner's Office (ICO) as a data controller or data processor - if applicable.
- TUPE obligations for employee transfers (handled through a clear, fair, and transparent transition process).

Poland

- Compliance with EU GDPR for all personal data processing.
- Registration with the Polish Data Protection Authority (UODO) when required for specific processing activities.
- Polish labor laws including the Polish Labor Code, working-time regulations, and mandatory social-security (ZUS) obligations

Philippines

- Compliance with the Data Privacy Act of 2012 and registration with the National Privacy Commission (NPC) for personal-data processing systems.
- Adherence to the Department of Labor and Employment (DOLE) rules for BPO/IT-BPM workforce.
- If operating as a BPO, compliance with outsourcing rules under the Philippine Economic Zone Authority (PEZA) or Board of Investments (when applicable).
- Telecom and consumer protection rules under the National Telecommunications Commission (NTC) for outbound calling.

Common vendor certifications clients expect:

- ISO 27001 for information security.
- ISO 9001 for quality management.
- PCI-DSS for payment processing.
- Cyber Essentials or Cyber Essentials Plus for UK government/enterprise contracts for UK
- SOC 2 Type II for international clients, especially US-based.

Leading US Life Insurer: Accelerating resilience and innovation with Contact Center Service Operations & Delivery

BUSINESS CONTEXT

Improve readiness and operational efficiency to address key challenges during the high-demand period from January to March, ensuring consistent service delivery and enhanced performance outcomes.

IBM WFM provides ongoing WFM services and continually achieves Forecasting accuracy variance of 5% or less, as well as achieving all Service Levels.

CHALLENGE

- Lack of industry standard WFM processes
- Lack of standard WFM reporting
- Accounts peak season is Jan-March, and they had not previously achieved service level during this time frame
- Monday & Tuesdays are highest call volume days, and client indicated they had scheduling concerns

SOLUTION

WFM Command Centre Solution has been deployed to support peak season operations and deliver sustainable results.

Advanced Forecasting & Capacity Planning:

- Implemented NICE CXone Erlang C for capacity planning and forecasting to optimize resource allocation.
- Implemented IBM WFM disciplines and processes
- Leveraged 2-3 years of historical volume data, AHT trends, and policy changes for more accurate planning.
- Utilized previous 3 years of historical data to forecast hiring plan
- Utilized 13 weeks of historical data for precise schedule forecasting.

Root Cause Analysis & Scheduling Enhancements:

- Conducted a comprehensive Root Cause Analysis (RCA) to address high AHT on Mondays.
- Reinforced All-Hands-on-Deck practices to ensure adequate coverage during peak call days.

Improved Reporting & Tools:

- Established standardized WFM reports to track key metrics, including attendance, schedule adherence, shrinkage, absenteeism, attrition, and forecast accuracy.
- Introduced Nice CXone to enhance WFM capabilities.

Team Training & Collaboration:

- Trained WFM and Operations teams to utilize new tools and reports effectively.

KEY OUTCOMES

95%–100%

Forecast Accuracy (WAPE) **Consistently Achieved** Within Industry Standard

>80%

Service Level

<5%

Abandonment Rate

Consistently Achieving >80% Service Level in 30 seconds and an Abandon Rate <5%

Outstanding Achievement

IBM's first peak season earned **client praise as their best performance** in years.

Transforming Customer Experiences to Exceptional Experiences

CHALLENGE

Client's the largest integrated provider of electricity in Brazil was struggling to achieve regulatory agency's customer care service levels goals. It had a rigid operating model supported by several outsourcing contracts with limited scope and little integration. The result was complex operating environment with little alignment with strategic objectives, low productivity and a poor NPS.

TRANSFORMATION

Client partnered with IBM on a Transform & Operate model that accelerates digital transformation across customer touchpoints including branches, contact center, back office, mobile, social media platforms and website. IBM's solution involves the redesign of customer experience strategy and technology roadmap to move from analog to digital, redefinition of operating model to deliver exceptional service.

IMPACT

30% reduction of Customer Care Operations cost over 10 years with savings from year 1 by driving customer adoption of digital channels. Achieved 90% of customer interaction over digital/self service channels.

90%

Customer Interaction over digital/self service channels

30%

Opex cost reduction

TCV $175M

68% associated with BPO

New Operating Model

An AI-native Customer Experience

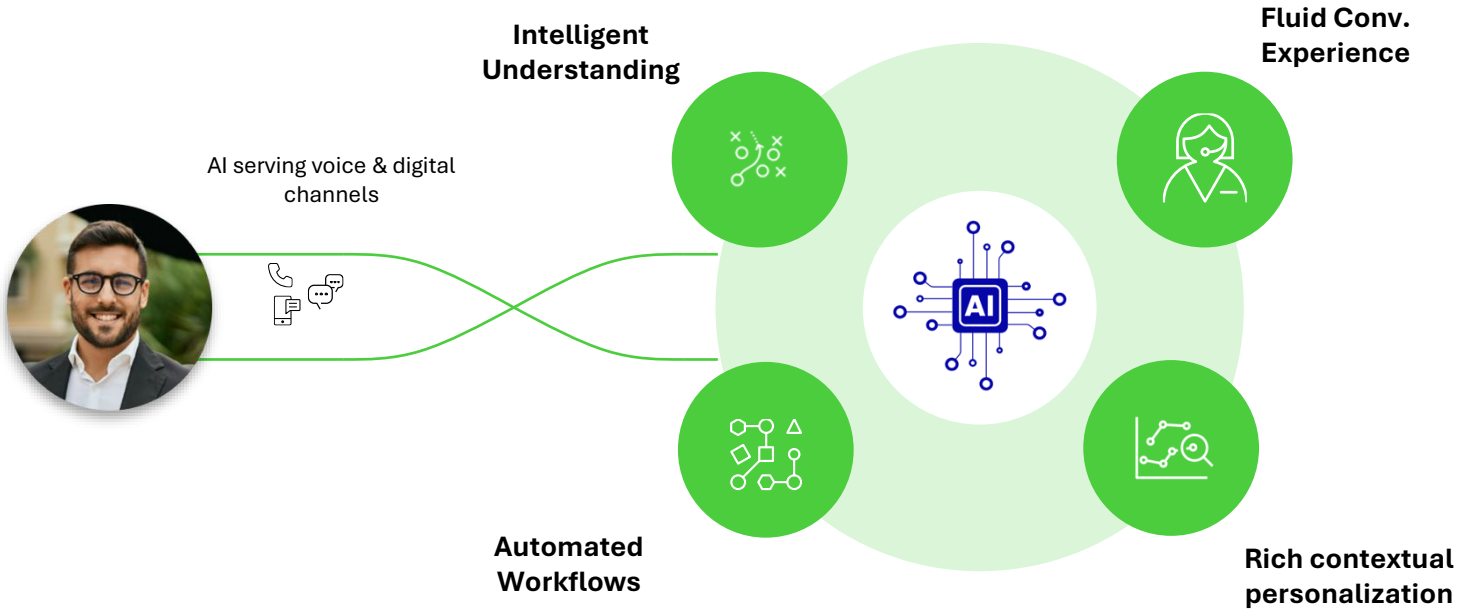
We design the end-to-end service understanding the customer's point of view to serve them across channels

Meet Mike

- Credit card holder
- Digitally native
- Flex across channels

Needs:

- Understand investment instrument rules and restrictions in **plain language**
- Get **fast, accurate answers** through the channel of choice
- **Avoid delays** or fraud due to lost or Stolen Card
- Minimize bill & payment inquiries tasks so he can focus on family and life



Persona Journey Mapping

Multi-Modal Transitions

Minimal User Burden

Assumptions behind Proposal covering type of pricing model, timing, locations, AI & Digital and Productivity Levers

Pricing Model

- Payment terms are current Net30.
- Back office HC split was not provided. Therefore, back office HC has been included in the overall HC. We will update the solution once the HC data is provided
- COLA is not included and will vary based on local currency fluctuations.
- Contract start date is August 1, 2026, and will last for 60 months with option to extend for 2 years
- We have estimated the EMEA operating costs We will complete due diligence, together with FIS, to validate those operating costs.

Locations

- For North American (NA), IBM will operate out of Philippines and India.
- For Europe, the Middle East and Asia (EMEA), IBM has proposed UK site takeover For the remaining EMEA locations, IBM will operate out of Poland
- IBM has proposed rebadging of UK and Philippines FIS employees

Migration (Timing and Locations)

- Any delay in contract signature delays the proposed migration timeline.
- Certain Back Office processes (Imaging, Correspondence, Returned Mail, and Card Destruction) appear to be file room activities requiring a physical presence. Once the scope and effort are clear, we will price them into our solution.
- The FTE count is based on the file "TMS baseline data – 6.0 Operations Sites."
- In-scope languages are English, Spanish, French-Canadian, German, Dutch, and Portuguese.
- In-scope channels are Voice, Chat, Text, Secure Message, and IVR.
- Emails are out of scope.
- The operating hours specified in the RFP will be adhered to.
- Migration timelines can change after due diligence.
- For Knowledge Transfer, standardized processes are to be followed across all FIS in-scope geographies.
- FIS to review and approve all Process Documents at the start of the migration.
- Access provisioning to all relevant TIS systems will be provided prior to start of Knowledge Transfer.
- FIS will provide SMEs to support knowledge transfer, train-the-trainer, certification, initial Go-Live, and Hypercare
- FIS will share 12 months of historical volume and other information prior to start of the Joint Workshop.
- IBM tools will be used during this migration.
- FIS approval will be sought before implementing any solution.
- FIS will facilitate client discussions to enable the client wave migration plan.
- The Client migration plan will undergo changes based on discussions with FIS, FIS Client, and IBM.

Transformation (AI, Digital, and Productivity Levers)

- The Year-over-Year volume growth rate is 1%.
- No NA clients require chat servicing.
- Chat servicing is limited to EMEA based on the volume shared in Appendix A 2.0 Baseline Volumes.
- As SMS and secure messaging are identified as in-scope, but no volumes have been provided, IBM conservatively assumed each message type represents 2% of the total channel mix, based on IBM industry experience.
- SMS customer service interactions will be asynchronous, and 2-way communication limited to defined, session time parameters. All SMS interactions will be serviced by AI and fallout will be routed to Live Chat.
- Secure Messaging customer service interactions will be asynchronous, and 2-way communication limited to defined, session time parameters. All Secure Messaging interactions will be serviced by AI. Fallout will be routed to Live Chat.
- IBM's experience shows that agentic AI AHT rarely exceeds 5 minutes (i.e., if the AI solution cannot resolve an inquiry in 5 minutes, it escalate to a human). Assuming this 5-minute limit, IBM has included a placeholder of 5 minutes for indicative estimation.
- IBM assumes up to 80% AI-driven deflection for all NA channel interactions and up to 65% AI-driven deflection for all EMEA channel interactions.

Rules behind Pricing Model for scenarios such as volume fluctuations, new sales and attrition

In a Contact Center BPO environment, pricing usually needs to account for the fact that call volumes aren't static.
They go up, they drop, and new lines of business come in. Because of that, most pricing models follow a few standard rules.

Volume Fluctuation Rules

- A contractual baseline volume or baseline FTE level is established as the reference point for pricing and staffing.
- A variance or tolerance band of ±10 percent is defined within which no pricing adjustment is required.
- When actual volumes exceed the variance band, surge or overtime rates will apply to cover rapid staffing increases or extended operating hours.
- When volumes fall below the lower threshold, FIS remains responsible for the minimum volume commitment.
- A periodic true-up process will be used (preferably monthly) to reconcile forecasted and actual volumes and adjust billing accordingly.
- Service level obligations will be reviewed and temporarily adjusted if volumes significantly deviate from forecasted levels.

New Sales / New Business Rules

- New lines of business or incremental volumes are priced based on a pre-defined rate card that outlines volume-based rates for various skills and channels.
- Onboarding, training, knowledge-transfer activities and ramp-up for new business are charged separately as transition fees.
- Additional technology requirements such as CRM licenses, telephony seats, or integrations are treated as pass-through costs.
- A formal lead time is required for volume increases to allow IBM to hire, train, and operationalize resources without premium charges.

Attrition Rules

- Minimum volume are defined to ensure cost recovery even when actual demand declines.
- Reductions in volume must follow a controlled ramp-down schedule, often limiting quarterly headcount decreases.
- Advance notice of at least 60 days is required before any volume or scope reduction to allow IBM to manage staffing transitions.
- Early attrition or premature ramp-down may trigger fees to recover recruitment, training, or infrastructure costs already incurred.
- If volumes fall significantly, unit rates may be recalculated, as fixed costs must be distributed across a smaller volume base.
- Service level requirements will be revised to reflect the smaller operational footprint.
