FIS TMS RFP — Vendor Evaluation

Genpact | EXL | IBM | Cognizant | Sutherland | Ubiquity

Summary

OVERALL ASSESSMENT

No single vendor leads on every dimension: Cognizant and Genpact score strongest on operations and issuer-domain depth; Genpact and IBM show the clearest technology governance posture; Sutherland differentiates on physical site continuity and speed-to-scope, while gaps concentrate on IBM (non-binding posture, no resubmission) and Ubiquity (FCA authorization pending 12–18 months, no named AI tools despite improved savings disclosure). Use this summary as the cross-tab index, then drill into vendor columns for evidence. Workshop 2 should stress-bind SLAs, migration cost caps, retained-cost transparency, and FCA or coexistence resolution where badges show Gap or Cannot commit.

Badge key: At-par | Partial | Below-par describe strength of response where materials exist. Not submitted / disclosed is used when the shortfall is missing submission or disclosure (so it is not read as a Partial or Below-par performance judgment). Same labels and vendor column order (Genpact through Ubiquity) are repeated on each topical tab for the dimensions that belong to that tab.

Evaluation dimension	Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
OPERATIONAL EXCELLENCE & DELIVERY						
1.1 SLA commitment	Partial	Partial	Below-par	Partial	Partial	Not submitted / disclosed
1.2 Location & language strategy	Partial	Partial	Below-par	At-par	At-par	Not submitted / disclosed

4.4 Contract posture	Partial	Partial	Partial	Partial	Partial	Not submitted / disclosed

Commercial Readiness

TAB TAKEAWAY FOR DOWN-SELECT

Contracting risk is concentrated in three areas: IBM's non-binding proposal posture, Cognizant's investment reconciliation gap ($18.6M unverified), and Ubiquity's regulatory authorization gap (no FCA). EXL offers the most structurally sound commercial position with binding FTE guarantees and outcome-based pricing mechanics. Sutherland's TCV is the highest in the field but includes the most comprehensive facility takeover commitment.

KEY IMPLICATIONS FOR FIS

FIS should require all shortlisted vendors to submit binding commercial terms as a condition of Workshop 2 advancement. Migration funding caps, COLA treatment, retained-cost disclosure, and FCA authorization timelines must be resolved before finalist selection. The gap between proposal-level pricing and contractual certainty is the single largest risk in the current vendor field.

ALIGNMENT WITH SUMMARY SCORECARD

Rows below mirror the Summary tab for Commercial readiness dimensions (5.1–5.5). Vendor order: Genpact, EXL, IBM, Cognizant, Sutherland, Ubiquity.

Evaluation dimension	Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
5.1 Contracting risks & levers	Partial	Partial	Below-par	Partial	Partial	Not submitted / disclosed
5.2 5-year TCV & commercial structure	At-par	At-par	Partial	Partial	Partial	Not submitted / disclosed
5.3 Synergy realization vs FIS targets	Partial	At-par	Below-par	Partial	Below-par	Not submitted / disclosed
5.4 Cost & delivery assumptions	At-par	At-par	Below-par	Partial	Below-par	Not submitted / disclosed
5.5 Rate card & one-time costs	At-par	Partial	Below-par	At-par	Partial	Not submitted / disclosed

5.1 Key contracting risks & negotiation levers

What are the top contractual risks and what leverage does FIS have in negotiation?

Genpact

TOP RISKS

- $51M deferred charge recovery in 2028–29 creates payback exposure; 7yr term request conditions tech migration investment
- Certainty TBD on all efficiency levers

NEGOTIATION LEVERS

- Gain-share alternative ($0 upfront) gives FIS structural optionality; existing FIS relationship provides switching-cost leverage
- Facility takeover terms are negotiable

EXL

TOP RISKS

- Severance excluded (FIS bears TUPE/BGB); CCaaS excluded from TCV; EMEA pricing opaque ("existing cost + 20%")
- 50% minimum NA volume requirement

NEGOTIATION LEVERS

- Binding FTE guarantee is unique — FIS can negotiate penalty mechanisms; outcome-based pricing transition at 18–24 months creates renegotiation window
- India-only offshore creates geographic concentration risk FIS can price

IBM

TOP RISKS

- Entire proposal non-binding — no contractual enforcement; $81M in retained costs sit outside TCV
- 0% COLA is a placeholder that will increase TCV $50–70M; Tab 9.0 blank — no efficiency assumptions to hold IBM accountable

NEGOTIATION LEVERS

- IBM's $460M serves as a market reference to benchmark other vendors even if IBM does not advance
- Technology credentials create partnership optionality outside this RFP

Cognizant

TOP RISKS

- $18.6M investment gap between claimed ($25M) and verified ($6.4M); AI savings marked "indicative only" — no contractual recourse if they underdeliver
- Y2 is the most expensive year ($121M) as all waves ramp

NEGOTIATION LEVERS

- COLA-inclusive pricing gives FIS cost certainty — use this as the benchmark standard; 100%* certainty claim can be converted to binding language in contracting
- Domain depth creates switching-cost leverage for Cognizant

Sutherland

TOP RISKS

- Highest TCV in field ($581M); $30M asset monetization credit is recovered via $34M front-loading payback
- "100% committed pending DD" has an escape clause; multiple commercial fields still TBD

NEGOTIATION LEVERS

- Strongest rebadge commitment and existing FIS relationship; facility takeover simplifies separation
- COLA now excluded (per revised guidance) — FIS can negotiate caps

Ubiquity

TOP RISKS

- Not FCA authorized — hard blocker for UK operations; $516M TCV depends on 70% offshore migration Ubiquity hasn't proven at scale
- Contractual floor is only 5–18.5%; Tab 5.0, 7.0, 9.0 not submitted

NEGOTIATION LEVERS

- $5M cash payment to FIS is unique; $0 one-time costs; cleanest upfront cost structure
- Competitive line-item rates in India/Ghana

DOWN-SELECT SIGNAL

Concentrated risk: IBM non-binding posture + retained-cost stack; Cognizant investment reconciliation; Ubiquity regulatory authorization; Sutherland TCV and DD escape hatches.

FIS IMPLICATION

Contracting workstreams must close migration funding caps, binding SLA posture, investment reconciliation, and FCA readiness before award — no finalist should advance with unresolved blockers above.

5.2 5-year TCV & commercial structure

Headline commercial comparison across 5-year total contract value, pricing model, term, savings guarantee, vendor investment, and one-time costs to FIS. All figures preliminary.

Criteria	Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
5yr TCV	$362M	$413M	$460M	$483M	$581M	$516M
Pricing model	Fixed fee + gain-share option	FTE-based → outcome-based	Fixed fee (phased ramp)	Fixed fee (quarterly)	Total cost of ownership	FTE-based (rate card)
Term	5yr (+2yr option)	5yr	5yr (+2yr option)	5yr	5yr (+2yr option)	5yr
Savings guaranteed?	No	Partial	No	Partial	Yes	Partial
Vendor investment	$21M	$24M	$11M (contingent)	$25M claimed ($6M verified)	$44M (nets to ~$0)	$5M
One-time to FIS	$51M deferred (recovered '28–'29)	$59M (training + dual run)	$15M + $81M retained	$6M + $55M retained	$30M asset monetization credit	$0

PRELIMINARY — subject to joint solutioning and due diligence. IBM figures from original submission (March 27, non-binding).

DOWN-SELECT SIGNAL

Genpact is the lowest 5yr TCV ($362M) but defers $51M to 2028–29 creating payback risk. EXL ($413M) offers the most balanced commercial structure with binding FTE guarantees and a pathway to outcome-based pricing. Sutherland guarantees 100% of savings but at the highest TCV ($581M) and with a DD escape clause. IBM's $460M is non-binding.

FIS IMPLICATION

TCV alone is misleading — FIS must evaluate total outlay (TCV + retained costs + one-time costs). IBM's true Y1 outlay is ~$224M ($128M billing + $15M CAPEX + $81M retained). Cognizant's Y1 is ~$133M ($78M billing + $55M retained). Vendors who do not disclose retained costs should be required to do so before finalist selection.

5.3 Synergy realization vs FIS targets

Quarterly savings trajectory (Q4'26–Q4'28) vs FIS in-year targets. Savings = $144.4M flat baseline minus total FIS outlay (vendor billing + retained costs where disclosed). Figures from revised submissions (April 7) except IBM (original, March 27).

In-year savings ($M)	FY26 target: $5.2M	FY27 target: $27.5M	FY28 target: $40.2M
Genpact	−$0.4M	$2.8M	$49.1M
EXL	$2.1M	$20.9M	$63.9M
IBM	$1.8M	$8.0M	$18.8M
Cognizant	$2.8M	$12.6M	$21.4M
Sutherland	−$5.7M	−$15.6M	$17.0M
Ubiquity	−$1.2M	−$3.0M	$19.0M

PRELIMINARY — quarterly deltas assume even distribution where vendors submitted annual totals only. Genpact is natively calendar-aligned. IBM original submission, explicitly non-binding.

DOWN-SELECT SIGNAL

EXL is the only vendor that meets or exceeds FIS targets across all three fiscal years ($2.1M / $20.9M / $63.9M vs targets of $5.2M / $27.5M / $40.2M). Genpact misses FY26 and FY27 but delivers the second-highest FY28 savings ($49.1M). Sutherland is the worst-performing through FY27 (−$15.6M cumulative miss) due to front-loaded costs. IBM never reaches target in any year.

FIS IMPLICATION

Two imperatives: (1) plan client migration jointly with vendors to accelerate consent and front-load value realization, and (2) design innovative commercial models (deferred billing, gain-share, asset monetization) to bridge FY26–FY27 savings gaps. No vendor except EXL delivers positive FY26 savings without financial engineering.

5.4 Cost & delivery assumptions

Year-by-year vendor billing, digital/AI productivity assumptions, labor arbitrage targets, onshore:offshore mix, and COLA treatment.

Criteria	Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
Y1 cost to FIS ($M)	$124	$119	$128	$78	$167	$149
Y2 cost to FIS ($M)	$103	$86	$114	$121	$138	$142
Y3 cost to FIS ($M)	$63	$64	$95	$109	$95	$74
Y4 cost to FIS ($M)	$48	$63	$84	$87	$91	$75
Y5 cost to FIS ($M)	$41	$63	$84	$87	$89	$75
Digital / AI productivity	NA: 40% EMEA: 28–38%	NA: 11% + 4% EMEA: 43%	Not provided	NA: 29% EMEA: Not provided	NA: 19% EMEA: 19%	Not provided
Labor arbitrage	NA: 68% EMEA: 60–65%	NA: 50% EMEA: –29%	Not provided	NA: 35–45% EMEA: 35–45%	NA: 33–41% EMEA: 37–45%	Not provided
On:Off mix	US 30:70 UK 30:70 NTH 30:70 DE 30:70 (Off: India & PH)	US 30:70 UK 30:70 NTH 30:70 DE 30:70 (Off: India)	US: N/D UK 100:0 NTH: N/D DE: N/D (Off: PH, IN, PL)	US 30:67:3 UK 27:63 NTH 60:40 DE 69:31 (Off: PH, IN, RO, SV)	US 30:70 UK 30:70 NTH 30:70 DE 30:70 (Off: PH, IN, DR)	US 30:70 UK 30:70 NTH 30:70 DE 30:70 (Off: GH, PH, IN, SV)
COLA	~3–5%	~4%	Not provided	~3–4%	~2.5–4%	3%

PRELIMINARY — IBM figures from original submission (no resubmission). N/D = Not disclosed.

DOWN-SELECT SIGNAL

Genpact delivers the lowest steady-state cost ($41M in Y5) driven by the highest labor arbitrage assumptions (68% NA, 60–65% EMEA). Cognizant has the lowest Y1 cost ($78M) but peaks in Y2 ($121M) as waves ramp — highest mid-contract cost in the field. EXL is the most consistent across years ($63M Y3–Y5). IBM and Ubiquity did not provide digital or labor arbitrage detail.

FIS IMPLICATION

Vendors with aggressive labor arbitrage assumptions (Genpact 68%, EXL 50%) are dependent on client consent for offshoring. If consent stalls, these savings compress. FIS should stress-test each vendor's P&L at 50% and 70% offshore adoption rates. Cognizant's NTH 60:40 and DE 69:31 onshore-heavy mix is the most conservative but also the most expensive long-term.

5.5 Rate card & one-time costs

Vendor rate comparison by delivery location and itemized one-time cost breakdown.

Location	Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
US (Onshore)	$48.48 (flat)	No onshore rates	No rate card	$41–$42.50	$47.19–$57.55	$40.95–$45.05
Canada	$48.48 (multilingual)	No onshore rates	No rate card	$38.10	$34.47–$35.33	$35.18–$38.70
Philippines	$16.47–$16.68	N/A	No rate card	$18.50; WFM $21	$12.85–$14.20; BO $8.34	$12.60–$13.86
India	$12.49–$12.92 (BO)	$10.13–$16.92	No rate card	$13.95; Support $16	N/A	$11.00–$12.10
UK	$42.07	Rebadge + 20%	No rate card	$38; BO $36.50	$40.55–$81.86	$44.74–$49.22
Netherlands	$49.40	Rebadge + 20%	No rate card	N/A (100% offshore)	$55.74–$81.86	$39.25–$43.17
Germany	$42.73	Rebadge + 20%	No rate card	N/A (100% offshore)	$42.73–$61.41	$50.23–$55.25
El Salvador	N/A	N/A	N/A	$24	N/A	$12.60–$17.88
Ghana	N/A	N/A	N/A	N/A	N/A	$9.70–$11.00

ONE-TIME COST BREAKDOWN

Cost type	Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
Program / transition fee	$9.69M	$0.7M	Not provided	Not provided	$0.24M	Not provided
Rebadging / HR transition	$6.78M	$0.86M	$15.1M	Not provided	Not provided	Not provided
Tech & transformation bundled	Not provided	Not provided	Not provided	Not provided	$44.1M (broad program)	Not provided
Tech overlay (integration + licensing)	$51.7M (fully loaded; CCaaS excluded)	—	$7.8M	$0.88M	Not provided	Not provided
Tech migration	—	—	$1.5M	$4.3M	Not provided	$2M
Training / enablement	$8.19M	$46.3M	Not provided	Vendor funded	Not provided	Not provided
Dual run	Not provided	$13.0M	Not provided	$1.2M	Not provided	Not provided

Cost type	Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
Min NA volume requirement	Yes — TBD	Yes — 50%	No	Yes — 100%	Not provided	Yes — 100%
Min contract duration	Yes — TBD	Yes — 5 yrs	No	Yes — 5 yrs	Not provided	Yes — 5 yrs

PRELIMINARY — IBM from original submission (no rate card provided). Cognizant one-time costs partially embedded; values derived from workbook allocations. Limited Ubiquity cost detail.

DOWN-SELECT SIGNAL

Ubiquity and Sutherland offer the lowest offshore rates (Ghana $9.70–$11.00, Philippines $8.34–$14.20). Cognizant's revised rates are competitive onshore ($41–$42.50 US) with aggressive offshore pricing for DE/NL (100% offshore). EXL's "rebadge + 20%" EMEA pricing creates an opaque cost structure. IBM provided no rate card — cannot be compared.

FIS IMPLICATION

Rate card transparency should be a contracting requirement. EXL's EMEA markup model and IBM's absence of rates must be resolved before finalist selection. The one-time cost comparison reveals wide variance — Genpact's $51.7M tech overlay vs Cognizant's $0.88M reflects fundamentally different solution architectures that will drive different long-term TCO trajectories.

Operational Excellence & Delivery

TAB TAKEAWAY FOR DOWN-SELECT

Cognizant and Genpact demonstrate the strongest SLA posture and language coverage, backed by existing TMS-comparable delivery experience. EXL is operationally credible but lacks EMEA site presence. IBM's SLA commitment is non-binding consistent with their overall proposal posture. Ubiquity lacks the regulatory footprint and site presence to deliver at this scale.

KEY IMPLICATIONS FOR FIS

FIS should require binding SLA commitments with financial penalties as a condition of shortlist advancement. Language coverage for Dutch and German is a hard constraint — vendors proposing AI translation overlays for these languages must demonstrate production readiness, not conceptual capability. Site continuity in EMEA (especially UK TUPE sites) should be confirmed in Workshop 2.

ALIGNMENT WITH SUMMARY SCORECARD

Rows below mirror the Summary tab for Operational excellence & delivery (1.1–1.2). Card 1.2 is location/language evidence; rollup scores apply to the full strategy. Vendor order: Genpact, EXL, IBM, Cognizant, Sutherland, Ubiquity.

Evaluation dimension	Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
1.1 SLA commitment	Partial	Partial	Below-par	Partial	Partial	Not submitted / disclosed
1.2 Location & language strategy	Partial	Partial	Below-par	At-par	At-par	Not submitted / disclosed

1.1 SLA commitment

Are they willing to contractually commit to take on the SLAs? Provide any nuances.

Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
Partial	Partial	Below-par	Partial	Partial	Not submitted / disclosed
6-month post-go-live baselining period before SLA penalties activate. Commits to 3–5% AHT reduction per client. SLA credits limited to critical SLAs only, with recoup rights if 3 months above target. Fixed-fee model with SLA-based pricing post-baselining.	Performance-based SLAs with applicable penalties from Day 1. Committed to providing SLA framework tied to KPIs. Specific target levels to be agreed during discovery. Will maintain bench of trained resources for coverage. Monthly volume reconciliation to forecast.	No contractual SLA commitment. Proposal explicitly non-binding. States willingness to discuss SLAs but no targets, penalties, or mechanisms submitted. Tab 4.0 SLA section incomplete.	Variance reduction targets, not absolute thresholds. 5–10% reduction in abandon rate variance; 10–15% AHT reduction over 12–24 months; 5–7% FCR improvement (benchmark ≥80%); 5–7% CSAT improvement (benchmark ≥85%). Stabilize in 90 days, optimize 6–12 months.	Tab 4.0 sparsely populated. Proposes 6-month baseline post go-live before committing SLAs. Targets to be defined per client queue during discovery. Existing FIS CIM SLA framework referenced as model.	No structured SLA framework submitted. Tab 4.0 not provided (non-standard Appendix B). Proposal references "performance-based approach" but no specific targets, penalties, or mechanisms.

DOWN-SELECT SIGNAL

No vendor submitted binding Day-1 SLA targets. EXL is the strongest with penalties from Day-1, though specific levels are TBD. Cognizant provides the most granular variance-reduction targets. IBM and Ubiquity have no meaningful SLA posture.

FIS IMPLICATION

FIS should mandate binding SLA targets with financial penalties as a contracting requirement. The 6-month baselining period proposed by Genpact and Sutherland delays accountability — FIS should negotiate this to 90 days maximum for shortlisted vendors.

1.2 Location & language strategy

Where will each vendor deliver from, which current TMS sites are they taking over, and how do they cover all 8 required languages?

Topic	Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
CURRENT TMS SITES						
Columbus, GA	✗ (new)	✗	✗	✗ (gov. hub)	✗ (WAH)	✗
Sudbury	✗	✗	✗	✗	✗	✗
Manila	✓	✓ PH delivery (not a current TMS site takeover)	✗	✓	✓	✓
Milton Keynes	✓ (takeover)	✗	✓ (takeover)	✗ (TUPE)	✓ (takeover)	✗
Coventry	✓ (takeover)	✗	✗	✗ (TUPE)	✓ (takeover)	✗
Hamburg	✗	✗	✗	✗ (Bucharest)	✓ (takeover)	✗
Barneveld	✗	✗	✗	✗ (Bucharest)	✓ (takeover)	✗
NEW & PROPOSED SITES						
India (Pune / Noida / Kochi)	✓ Pune — voice & BO	✓ Pune/Noida voice; Kochi BO; NA+UK→India M4	✓ India delivery	✓ Coimbatore BO + India footprint	✓ India	✓ India
Philippines (Manila expansion / new)	✓ Manila scaled up	✓ 14K+ colleagues; 8 centers; 17yr; PCI/ISO — depth vs India-only concentration	✓ Philippines	✓ Manila PH (new)	✓ Manila	✓ Philippines
Romania / Bulgaria (Bucharest / Sofia)	✓ Bucharest — DE/NL multilingual	—	—	✓ Bucharest — DE/NL nearshore	✓ Bulgarian hub — EU multilingual	—
El Salvador	—	—	—	✓ Spanish	—	✓ Nearshore delivery
Dominican Republic	—	—	—	—	✓ Spanish delivery	—

Topic	Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
Ghana	—	—	—	—	—	✓ Unique low-cost offshore
Halifax CA	—	—	—	✓ FR-CA hub	—	—
Poland	—	—	✓ New delivery (only IBM)	—	—	—
LANGUAGE COVERAGE (8 REQUIRED)						
EN-US	✓ native	✓ native	✓ native	✓ native	✓ native	✓ native
EN-UK	✓ native	✓ native	✓ native	✓ native	✓ native	✓ native
EN-CA	✓ native	✓ native	✓ native	✓ native	✓ native	✓ native
ES	✓ native	✓ native	✓ native	✓ native	✓ native	✓ native
FR-CA	✓ native	✗	✓ native	✓ native (Halifax)	✓ native	✗
DE	✓ Bucharest	✓ (rebadge)	✓ native	✓ Bucharest	✓ native	✓ (rebadge)
NL	✓ Bucharest	✓ (rebadge)	✓ native	✓ Bucharest	✓ native	✓ (rebadge)
PT	✓ native	✗	✓ native	✓ native	✓ native	✗

DOWN-SELECT SIGNAL

Cognizant has the most granular 7-site design with regulatory grounding. Sutherland is the only full EMEA site takeover. EXL does not assume the current Manila TMS site but **actively delivers from the Philippines** (14,000+ colleagues; 8 centers; see PH expansion row). DE/NL language coverage is a hard constraint — EXL and Ubiquity depend on rebadged staff, creating a time-limited capability window.

FIS IMPLICATION

FIS should confirm facility exit/transfer terms with Genpact and Sutherland in Workshop 2. Vendors relying on rebadged staff for DE/NL must present language continuity plans. EXL's India-only offshore model creates geographic concentration risk that the Philippines operation could mitigate if activated.

Technology & AI

TAB TAKEAWAY FOR DOWN-SELECT

Genpact and IBM demonstrate the strongest technology posture — Genpact with the highest governance commitment score (11 of 12 Commit) and IBM with unmatched AI credentials (watsonx, #1 market share). Cognizant defers governance to FIS-owned platforms, resulting in 5 "Cannot Commit" responses — appropriate given the scope but creates accountability ambiguity. EXL's AI tools are credible but governance submission is incomplete.

KEY IMPLICATIONS FOR FIS

The tech governance grid (Card 2.1) should be a contracting prerequisite: any vendor with "Cannot Commit" on data ownership or exit rights should not advance without resolution. The TSYS-to-FIS tech migration is a $10–15M workstream that only Genpact explicitly commits to funding. FIS should require binding migration cost caps from all shortlisted vendors.

ALIGNMENT WITH SUMMARY SCORECARD

Rows below mirror the Summary tab for Technology & AI (2.1–2.4). Card 2.1 uses per-provision badges in the body; the row below is the holistic rollup. Vendor order: Genpact, EXL, IBM, Cognizant, Sutherland, Ubiquity.

Evaluation dimension	Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
2.1 Tech governance	At-par	Partial	At-par	Below-par	Partial	Not submitted / disclosed
2.2 Tech migration funding	At-par	Below-par	Partial	Partial	Below-par	At-par
2.3 AI overlay & savings	Partial	At-par	Not submitted / disclosed	Partial	Partial	Not submitted / disclosed
2.4 Platform compatibility	At-par	Partial	Partial	At-par	Partial	Not submitted / disclosed

2.1 Tech governance compliance

Vendor commitment posture on 4 critical governance provisions

Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
OPEN APIS / NO LOCK-IN: At-par	OPEN APIS / NO LOCK-IN: Cannot commit	OPEN APIS / NO LOCK-IN: At-par	OPEN APIS / NO LOCK-IN: Cannot commit	OPEN APIS / NO LOCK-IN: Partial	OPEN APIS / NO LOCK-IN: Not submitted / disclosed
FIS DATA OWNERSHIP: At-par	FIS DATA OWNERSHIP: At-par	FIS DATA OWNERSHIP: At-par	FIS DATA OWNERSHIP: At-par	FIS DATA OWNERSHIP: At-par	FIS DATA OWNERSHIP: Not submitted / disclosed
12-MO COEXISTENCE ENV: At-par	12-MO COEXISTENCE ENV: At-par	12-MO COEXISTENCE ENV: At-par	12-MO COEXISTENCE ENV: Cannot commit	12-MO COEXISTENCE ENV: At-par	12-MO COEXISTENCE ENV: Not submitted / disclosed
EXIT RIGHTS / TELEPHONY: At-par	EXIT RIGHTS / TELEPHONY: At-par	EXIT RIGHTS / TELEPHONY: At-par	EXIT RIGHTS / TELEPHONY: At-par	EXIT RIGHTS / TELEPHONY: Cannot commit	EXIT RIGHTS / TELEPHONY: Not submitted / disclosed

DOWN-SELECT SIGNAL

Genpact and IBM achieve full Commit on all 4 provisions — strongest governance posture. Cognizant's 2 Cannot Commits (open APIs, coexistence) reflect a scope-limited approach that defers to FIS-owned platforms. Ubiquity did not submit governance data.

FIS IMPLICATION

Cognizant's "Cannot Commit" on coexistence creates transition risk — no 12-month parallel run means a harder cutover. FIS should require a detailed coexistence architecture plan from any shortlisted vendor with Partial or Cannot on this provision.

2.2 Technology migration funding

Is the vendor funding the TSYS-to-FIS technology migration? What is the discrete amount committed, and under what conditions?

Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
At-par	Below-par	Partial	Partial	Below-par	At-par
$11M	$19.3M credit	$11.3M	$6.4M	$44M credit	$2M
Funding tech migration? Yes	Funding tech migration? Partial	Funding tech migration? Partial	Funding tech migration? Partial	Funding tech migration? Charged to FIS	Funding tech migration? Partial
Amount: $11M (discrete tech migration)	Amount: $19.3M credit (structured; not discrete cash to migration line)	Amount: $11.3M CAPEX / migration-related (FIS-borne per proposal)	Amount: $6.4M verified traceable to migration and overlay	Amount: $44M asset / program credit (financial engineering; nets to ~$0)	Amount: $2M vendor-funded
Conditions: 7yr term requested	Conditions: CCaaS migration excluded from base scope	Conditions: Contingent on full scope; entire proposal non-binding	Conditions: $18.6M gap between claimed $25M and verified amount	Conditions: Tech migration not funded as discrete vendor commitment	Conditions: No CXone migration plan submitted
NICE Platinum Partner; 14 NAM + 9 EMEA wave CCaaS migration plan in submission.					

DOWN-SELECT SIGNAL

Genpact explicitly commits to funding the TSYS-to-FIS tech migration as a discrete line item ($11M). EXL shows a $19.3M credit structure but CCaaS remains excluded from base scope (Below-par). IBM is Partial at $11.3M FIS-borne CAPEX. Cognizant verified $6.4M vs $25M claimed. Sutherland's $44M credit package nets to ~$0 (Below-par). Ubiquity commits $2M vendor-funded (At-par) though CXone plan detail is still thin.

FIS IMPLICATION

The tech migration is estimated at $10–15M industry-standard. Vendors who exclude it from their TCV create a hidden FIS cost. FIS should require binding migration cost caps and milestone-based release of funds in the contract.

2.3 AI overlay & savings commitment

What AI overlays are they bringing to the table? How sophisticated is the tool set? Are they willing to commit to **AI/digital** savings (productivity-only levers are out of scope for this card)? Implementation timeline and time-to-value?

AI Tool Category	Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
IVR / Self-Service	Voice IVA	—	—	LLM-Driven IVR	AI-enabled IVA	—
Agent Assist	Agent Assist	Smart Agent Assist	Cobee Pro	Real-time Agent Assist	Knowledge Assist	—
Chat / Conversational	AI Chat Agents	Agentic Conv. AI	Multi-Agent Conv. AI	—	AI Chatbot	—
Translation / Accent	Language Translation	Accent Neutralization	ConnectLingua	—	—	—
QA / Performance	Auto QA, Perf Mgmt	EXL Insight Hub	Klarity	Continuous Improvement	—	—
Analytics / Forecasting	AI Forecasting, Coach	Transform.CX	Procedure Eater	Digital Dashboard	—	—
Process Automation	Workflow Orchestration	iBOT (RPA), Xtrakto.AI	ICA	Agentic Process Auto	Agentic AI Back-Office	—
Dispute / Fraud Specific	Dispute & Fraud Modules	Investigation Assist	—	—	—	—
Summarization	Interaction Analyzer	—	—	Auto Call Summarization	—	—
Messaging / Channels	—	—	—	—	WhatsApp/SMS	—
Total named tools	28	10	6	7	5	0
AI / digital savings committed	Not split out (39.5% submission is combined AI+Productivity; not binding)	25% AI/digital upside (binding)	Not disclosed	29% AI/digital (indicative)	19.3% AI/digital (pending DD)	Not split out (Y1 5% → Y5 18.5% contractual)

Genpact

Partial

Tools (28): Voice IVA, AI Chat Agents, Language Translation Agent, Agent Assist, Auto QA Agent, Agent Performance Mgmt, Interaction Analyzer, AI Forecasting (AiPlay), AI Coach, Dispute Analyst Modules, Fraud Analyst Modules, Dynamic Workflow Orchestration.

Sophistication — Enterprise-grade

Largest AI tool portfolio in the field; 28 named tools across front-office, back-office, and analytics (revised Q10 submission). Runs on Genpact AI Platform with Claude (Anthropic) and MCP architecture.

AI / digital savings committed: Not separately broken out — vendor cites 39.5% **combined** AI+Productivity (NA). This line excludes standalone productivity; **not binding** — certainty = "TBD" for all geographies.

EXL

At-par

Tools (10): Smart Agent Assist, Accent Neutralization, MiAI (Call Simulation), Training.AI, EXL Insight Hub, Transform.CX, Agentic Conversational AI, iBOT (RPA), Xtrakto.AI (IDP), Investigation Assist.

Sophistication — Proven at scale

10 tools with specific AHT/containment impact quantified; existing FIS analytics relationship (Customer 360) provides data foundation.

AI / digital savings committed: 25% AI/digital upside (binding per revised submission). Non-AI / base FTE-efficiency commitments (e.g. separate committed levers) are excluded here. Tab 9.0 certainty = "YES".

Time to value: Agent Assist from Month 1; Agentic AI from Month

IBM

Partial

Tools (6): Cobee Pro, Klarity, Procedure Eater, IBM Consulting Advantage (ICA), NICE CXone (ConnectLingua), Multi-Agent Conversational AI.

Sophistication — Enterprise-grade

watsonx platform, #1 AI market share, 50K+ engagements; tools appear productivity/consulting-focused rather than operational AI.

AI / digital savings committed: Not disclosed — Tab 9.0 blank. No AI/digital efficiency assumptions submitted. Per-transaction AI pricing proposed as a separate billing stream.

Time to value: Not specified; proposal references "accelerated transition" but no deployment timeline.

⚠ FLAGGED: AI tools appear to be vendor-enablement tools

Cognizant

Partial

Tools (7): LLM-Driven Self-Service IVR, Real-time Agent Assist, Auto Call Summarization, Agentic Process Automation, Digital Dashboard, Continuous Improvement (Lean Six Sigma ×2).

Sophistication — Proven at scale

7 tools with milestone-based impact quantification (M12, M18, M24, M27); all built on FIS-owned NICE CXone — no proprietary platform.

AI / digital savings committed: 29% AI/Digital (NA). **Indicative only** — "indicative outcomes provided" per Tab 5.0; not contractually binding. 100%* certainty in Tab 9.0 but asterisk means AI is aspirational.

Time to value: IVR containment improvement from Month 12; Agent Assist

Sutherland

Partial

Tools (5): AI-enabled IVA, Unified Desktop with Knowledge Assist, Agentic AI Back-Office, AI Chatbot, Messaging Services (WhatsApp/SMS).

Sophistication — Emerging

5 tools with FTE-level impact quantification; more focused on containment/deflection than agent productivity; no dollar quantification per tool.

AI / digital savings committed: 19.3% AI/Digital (NA) — productivity carve-outs excluded from this line. **39.7% certainty** — lowest in field. Revised submission strengthens to "100% committed pending DD" but no tool-level binding.

Time to value: Not specified in structured format.

Ubiquity

Not submitted / disclosed

Tools: Not submitted in structured format. Proposal references "AI and Machine Learning" and "15–30% efficiency improvement over 3 years" but no named tools, no deployment timeline, no quantified impacts.

Sophistication — Conceptual

No Tab 5.0 submitted; AI capability described directionally in proposal text only.

AI / digital savings committed: Not committed. "Subject to validation during discovery." Year-by-year contractual path (Y1 5% → Y5 18.5%) is not broken out as AI/digital-only.

Time to value: Not specified.

Time to value: IVA deployment Month 3–6; full AI suite by Month 12–18.	6–9; full suite by Month 18.	*(helping IBM deliver) rather than operational AI (reducing FIS FTE/AHT).*	from Month 12; full AHT reduction (20%) by Month 27.		

DOWN-SELECT SIGNAL

EXL leads on **binding AI/digital upside** (25%; excludes separate non-AI efficiency levers in other sections). Genpact has the deepest AI tool portfolio (28 tools, revised Q10) but does not isolate AI/digital from productivity in its headline % (TBD binding). IBM's AI credentials are world-class but the tools proposed appear consultant-facing, not operation-facing. Cognizant builds entirely on FIS-owned CXone — lowest lock-in risk but also lowest vendor accountability for AI outcomes. Ubiquity has a contractual year-by-year path but no AI/digital-only carve-out and no named AI tools.

FIS IMPLICATION

The gap between vendor AI claims and contractual commitments is the single largest risk in the synergy projections. FIS should require all shortlisted vendors to submit binding, milestone-based AI savings commitments with financial penalties in the contract. Vendors whose AI savings are marked "TBD" or "indicative" should not receive credit for those savings in the business case until they become binding.

2.4 Platform compatibility & ownership

Is the vendor's approach compatible with FIS's future-state platform (NICE CXone)? Who owns the AI models, data, and configurations at contract exit?

Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
At-par **CXone compatible:** Yes — NICE Platinum Partner with detailed CCaaS migration methodology (14 NAM + 9 EMEA waves with 12-month parallel runs). Genpact AI Platform integrates via API with CXone. **AI/data ownership at exit:** FIS retains all data. Genpact commits to open APIs, full data extraction at no cost, and 12-month coexistence. AI models built on Genpact platform — ownership at exit subject to negotiation.	Partial **CXone compatible:** Yes — proposes operating on NICE CXone. CCaaS migration explicitly excluded from base commercials ("additional if customer requires"). **AI/data ownership at exit:** FIS retains data ownership. EXL uses client/platform-provided APIs. "Cannot Commit" on providing own open APIs. AI tools (Agent Assist, iBOT, etc.) are EXL-proprietary — ownership at exit not addressed.	Partial **CXone compatible:** Yes — proposes NICE CXone with ConnectLingua integration. Also proposes watsonx platform components which are IBM-proprietary. **AI/data ownership at exit:** Commits to full data extraction rights. Data resides in client-controlled environments. However, watsonx-based AI models and IBM Consulting Advantage tools are IBM IP — FIS would lose access to these at contract exit.	At-par **CXone compatible:** Yes — entire technology approach is built on FIS-owned NICE CXone. Cognizant is not bringing or funding its own platform. All AI tools are native to CXone or FIS-owned AWS. **AI/data ownership at exit:** Strongest position — Cognizant does not own, control, or govern any platform components. All data, configurations, and AI capabilities remain on FIS-owned infrastructure. Lowest exit risk in the field.	Partial **CXone compatible:** Yes — AI services integrate with NICE CX, AWS, and DSP. "Partial Commit" on open APIs — applicable for FIS extended tech but unmapped systems TBD. **AI/data ownership at exit:** FIS retains data on FIS-owned platforms. "Cannot Commit" on full data extraction from external service providers (AWS, FIS extended tech). Sutherland-provided AI services subject to separate exit terms.	Not submitted / disclosed **CXone compatible:** References providing support for IVR in FIS's AWS Connect/CXone instance. No detailed platform approach submitted. **AI/data ownership at exit:** Tab 5.0 not submitted. No governance commitments on record. ⚠ *FLAGGED: Insufficient data to assess platform compatibility or exit risk.*

DOWN-SELECT SIGNAL

Cognizant offers the lowest platform lock-in risk — everything runs on FIS-owned infrastructure. Genpact and IBM bring the most capable proprietary platforms but create exit dependency. EXL excludes CCaaS migration entirely, creating an unknown cost exposure.

FIS IMPLICATION

FIS should distinguish between "vendor builds on our platform" (Cognizant — low exit risk) and "vendor brings their own platform" (IBM watsonx, Genpact AI Platform — high exit risk). Exit rights, IP ownership, and AI model portability clauses should be explicit in the MSA. EXL's CCaaS exclusion should be priced and included in the contract scope.

Client & Workforce Migration

TAB TAKEAWAY FOR DOWN-SELECT

Cognizant provides the most detailed migration RACI (49 activities across 7 categories) with explicit regulatory grounding. Genpact's revised plan reflects 30% onshore retention and accelerated timeline. EXL's rebadge-then-transition model delivers NA savings from Month 4. IBM's phased ramp is the slowest to reach full scope. Sutherland proposes the fastest Day-1 rebadge but at the highest upfront cost.

KEY IMPLICATIONS FOR FIS

Retained staff cost exposure during transition is the largest hidden planning variable — IBM ($81M across Y1–Y2) and Cognizant ($55M in Y1) carry material FIS costs outside the TCV. FIS should require all shortlisted vendors to submit quarterly retained-cost forecasts in Workshop 2. Works council timelines in Germany (6–10+ months) and Netherlands will gate EMEA migration regardless of vendor.

ALIGNMENT WITH SUMMARY SCORECARD

Rows below mirror the Summary tab for Client & workforce migration (3.1–3.4). Vendor order: Genpact, EXL, IBM, Cognizant, Sutherland, Ubiquity.

Evaluation dimension	Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
3.1 Day-1 readiness & retained cost	Partial	At-par	Below-par	Partial	At-par	Not submitted / disclosed
3.2 Migration approach & sequencing	At-par	At-par	Partial	At-par	At-par	Not submitted / disclosed
3.3 Constraint handling	At-par	At-par	Partial	At-par	Partial	Below-par
3.4 Workforce migration	At-par	At-par	Partial	At-par	At-par	At-par

3.1 Day-1 readiness & FIS retained cost exposure

When is the vendor proposing to go live? What is FIS's retained cost exposure during transition? How long does FIS carry dual cost before the vendor is fully operational?

	Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
	Partial	At-par	Below-par	Partial	At-par	Not submitted / disclosed
Proposed go-live	Nov 2026 (2-month stub)	Q4 2026	Aug 2026 (assumed)	Q4 2026 (Day-1 ~1,000 FTE)	Q4 2026 (full Day-1 rebadge)	Q1 2027
Day-1 rebadge assumption	Nov 2026 stub — partial	Full rebadge from Month 1	No — phased M3 to M15	~1,000 FTE Day-1 (Wave 0)	95% Day-1 full scope	Not until Q1 2027
FIS retained cost (Y1)	Not separately disclosed	Not separately disclosed	$81M total (CY26 $55M + CY27 $26M)	$55.3M	Not separately disclosed	Not separately disclosed
Months to full scope	~14 months	~12 months	~18 months	~12 months (4 waves)	Immediate (95% Day 1)	~18 months
	2-month stub + 12-month Y2 ramp. Clarify whether TCV includes or excludes FIS-retained workforce in Y1.	NA savings from Month 4; DE/NL from Month 10. Confirm retained-cost treatment vs. rebadge transition.	Phased ramp: Q1Y1=$2.2M billing → Q4Y1=$31M → full scope Q2Y2. Largest disclosed FIS retained-cost load.	Declining through waves; all complete by end of Y1 per proposal structure.	Full rebadge model — minimal parallel FIS staff; highest Y1 TCV ($167M) in field per evaluation.	Migration Q2Y1–Q2Y2; offshore Q1Y3. Confirm disclosure of dual-cost vs. TCV boundary.

DOWN-SELECT SIGNAL

Sutherland achieves full scope fastest through Day-1 rebadge but at the highest upfront cost ($167M Y1). IBM is the slowest and most expensive on total FIS outlay ($81M retained + $67M billing = $148M in first 12 months). EXL and Cognizant offer the most balanced ramp profiles.

FIS IMPLICATION

IBM and Cognizant's retained costs are the largest hidden planning variable. FIS should build these into its internal budget forecasts. Vendors who do not disclose retained costs (Genpact, EXL, Sutherland, Ubiquity) should be asked to confirm whether their Y1 TCV includes or excludes FIS-retained workforce costs. Vendors not disclosing retained costs are likely assuming full scope transfer on Day 1 — unrealistic given client consent dependencies. FIS should stress-test each vendor's timeline at 50% and 70% Day-1 consent rates.

3.2 Client migration approach & sequencing

What is their migration approach, when does it start, how long does it take, and how are clients sequenced?

	Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
	At-par	At-par	Partial	At-par	At-par	Not submitted / disclosed
Proposed start	Nov 2026	Q4 2026	Aug 2026 (assumed)	Q4 2026 (Wave 0)	Jun 2026	Q1 2027
Total duration	14 months	12 months	18+ months	12 months	10 months	18 months
Number of waves	3 waves	5+ phases	15 waves	4 (+ Wave 0)	21 waves	Not structured
Sequencing	NA → UK → DE/NL	Tier 3 → 2 → 1	PH/UK → NA → DE → NL	FTE-priority	3-phase	Client readiness
	Sequencing: Geographic — NA first (40+ clients from Columbus, Canada, Philippines), then remaining UK, then Germany/Netherlands last due to regulatory complexity. **Wave composition:** W1 phased by risk — lower-complexity clients first to establish operating rhythm. EMEA intentionally last due to multi-country regulatory landscape.	**Sequencing:** Revenue-tiered — smallest clients first (Tier 3, >$1M) to prove model with lowest business exposure, then scale. Back-office/off-phone functions first, then customer service, then fraud. **Wave composition:** Phase 1 starts with off-phone accounting for ~15 Tier 3 clients. Phase 2 adds customer service for same tier. Progressively adds Tier 2 then Tier 1 with full service scope.	**Sequencing:** Geography + service cluster — Philippines and UK rebadge first, then NA clients in progressively larger cohorts, then Germany by service cluster (CS, Risk, Tier 2), then Netherlands by client. **Wave composition:** NA waves balance effort with number of clients. German scope split by service function due to large staff count. Each wave sized to minimize business risk.	**Sequencing:** Priority-tiered by FTE count — largest NA clients first (W1–W2: 519 FTE across 7 clients), then mid-tier NA + EMEA UK (W3), then tail NA + EMEA DE/NL (W4). Day-1 rebadge ~1,000 FTE in Wave 0. **Wave composition:** W1–W2 = top 7 NA clients by volume (50–130 FTE each). W3 = 11 NA clients + Milton Keynes + Barneveld. W4 = 16 remaining NA + Hamburg + Barneveld. Most detailed RACI in the field (49 activities across 7 categories).	**Sequencing:** Three-phase — (1) backfill classes for 5% fallout contingency, (2) rebadge by geography, (3) right-shoring by function from simplest to most complex. **Wave composition:** Backfill (W1–3) by geography: US/PH → CA/UK → DE/NL. Rebadge (W4–6) same sequence. Right-shoring (W7–21) by function: accounting → back-office → IVR/tech → customer service → collections → loyalty → disputes → fraud. EMEA right-shoring runs in parallel (W16–21).	**Sequencing:** Client readiness-driven — medium-sized clients first as validation wave, then subsequent waves based on contractual timelines and regulatory constraints. Offshore migration as a single step-change in Q1Y3.

DOWN-SELECT SIGNAL

Sutherland has the most granular wave plan (21 waves) but the fastest timeline (10 months) — this requires executing multiple parallel workstreams. Cognizant's 4-wave plan is the most balanced between speed and manageability. EXL's revenue-tiered approach is the most risk-managed. IBM's 15 waves over 18+ months is the most conservative and slowest.

FIS IMPLICATION

Wave sequencing directly determines when FIS sees savings. Revenue-tiered approaches (EXL) deliver lower-risk but slower value. Volume-tiered approaches (Cognizant) put the most revenue at risk early but compress timeline. Sutherland's parallel backfill + rebadge + right-shoring creates the highest execution complexity. FIS should evaluate which sequencing approach best balances speed-to-value against operational continuity risk.

3.3 Constraint handling

Did they address client-and-region specific constraints in their wave design (e.g., consent, queues, languages, regulatory)?

Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
At-par	At-par	Partial	At-par	Partial	Below-par
Client consent gating ✓	Client consent gating ✓	Client consent gating ✓	Client consent gating ✓	Client consent gating ✓	Client consent gating ✓
Hybrid queue handling ✓	Hybrid queue handling ✓	Hybrid queue handling ✗	Hybrid queue handling ✓	Hybrid queue handling ✗	Hybrid queue handling ✗
Language constraints ✓	Language constraints ✓	Language constraints ✓	Language constraints ✓	Language constraints ✓	Language constraints ✗

		⚠ *FLAGGED: European regulatory constraints not explicitly addressed in migration plan.*			⚠ *FLAGGED: Not currently FCA authorized. Timeline to obtain not provided.*

DOWN-SELECT SIGNAL

Cognizant has the most comprehensive regulatory grounding with explicit references to TUPE 45-day notice, §613a BGB Works Council consultation, and Art 7:662. Genpact and EXL also address all constraints. IBM and Ubiquity have significant gaps in European regulatory coverage.

FIS IMPLICATION

Ubiquity's lack of FCA authorization is a hard blocker for UK operations — timeline to obtain is unknown and could delay migration by 6–12+ months. IBM's gaps in European labor law coverage suggest the phased ramp was designed without EMEA-specific planning. Both issues should be disqualifying absent resolution.

3.4 Workforce migration

What is their approach to workforce migration? Are they planning to rebadge everyone? Site takeover? Severance? Same salaries/benefits?

Dimension	Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
Status	At-par	At-par	Partial	At-par	At-par	At-par
Rebadge scope	Full workforce — all in-scope FTE, all geographies	Full workforce — all sites, workforce only (no site takeover)	Phased — PH (M3), UK (M6), Columbus (M12), EMEA (M13–15). Not Day-1	Day-1 rebadge ~1,000 FTE (US + UK). Remaining waves through Y1	95% Day-1 rebadge across all sites simultaneously. 5% fallout backfilled offshore	Has expressed willingness to rebadge 100% of the workforce
Site takeover	Yes — "intention to take over both workforce and site wherever strategic"	No — all 7 sites marked "N." Workforce-only approach	UK Milton Keynes only. All other sites: Neither or Workforce Only	"Open to jointly explore with FIS" — not committed. Workforce only	Yes — sub-lease + workforce at all 7 sites. Full EMEA facility takeover	Not addressed. Proposes retaining current locations
Severance	Pre-transfer = FIS; Post-transfer = Genpact (Genpact tenure only)	Yes — EXL will pay severance if employees downsized	Will adhere to local regulatory requirements only	Conditional — not proactively committed	No — "No employees expected to be impacted"	Not addressed
Salary match	Based on regulation (not confirmed as match)	Yes — same salaries	Yes — same salaries	Yes — same salaries	Yes — same salaries	Not addressed
Retention bonus	TBD — ~2-month salary for 25% of resources	Yes — offered to rebadged employees	Recommends discussing; no firm commitment	Conditional — not universally offered. 95%+ acceptance claimed	Yes — for select key employees only	Not addressed

DOWN-SELECT SIGNAL

Sutherland offers the most comprehensive workforce plan: 95% Day-1 rebadge, full site sub-lease, all assets acquired. EXL offers the strongest employee protections (salary match, benefits, retention bonus, severance all confirmed "Yes"). Cognizant's Day-1 rebadge of 1,000 FTE with 95% acceptance claim is well-evidenced. IBM's phased approach is the slowest — full rebadge not complete until Month 15.

FIS IMPLICATION

Severance liability is a material cost gap. EXL commits to paying severance; Genpact splits it (pre-transfer = FIS, post-transfer = Genpact); Sutherland and IBM do not commit. FIS should budget $5–10M+ for TUPE/BGB/Art 7:662 severance obligations

that vendors are not absorbing. Site takeover terms (Sutherland's sub-lease at written-down value vs Genpact's "open to discuss") should be negotiated in parallel with the MSA.

Partnership Readiness

TAB TAKEAWAY FOR DOWN-SELECT

Cognizant and Sutherland have the deepest issuer-services domain credentials. Cognizant is the #1-ranked Cards & Payments BPO with 29 years of experience and TS2 platform certification. Sutherland has an existing FIS CIM relationship and serves 3 of the top 5 global issuers. Genpact brings an existing FIS relationship with proven 1,600+ FTE rebadge execution. EXL's FIS relationship is analytics-focused (CMO/Customer 360), not operational. IBM's case studies are not card-issuer specific.

KEY IMPLICATIONS FOR FIS

Domain depth in issuer card servicing is a material differentiator for transition risk. Vendors without TS2/FIS platform experience will require longer knowledge transfer and carry higher early-stage defect risk. FIS should weight issuer-specific case studies heavily in scoring and validate claims through reference checks with shortlisted vendors.

ALIGNMENT WITH SUMMARY SCORECARD

Rows below mirror the Summary tab for Partnership readiness (4.1–4.4). Vendor order: Genpact, EXL, IBM, Cognizant, Sutherland, Ubiquity.

Evaluation dimension	Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
4.1 Case studies	At-par	At-par	Partial	At-par	At-par	Not submitted / disclosed
4.2 Industry track record	At-par	At-par	At-par	At-par	At-par	Not submitted / disclosed
4.3 Operational capabilities	At-par	At-par	At-par	Partial	At-par	Not submitted / disclosed
4.4 Contract posture	Partial	Partial	Partial	Partial	Partial	Not submitted / disclosed

4.1 Case studies & references

Primary regulated FS BPO case study (300+ FTE migration) and reference summary; additional studies and full reference detail available on request (Appendix B Tab 3.0 — Relevant Experience).

Genpact

At-par

PRIMARY CASE STUDY (300+ FTE)

Industry / client	Banking – FinTech
Scale	1,300+ FTE
Outcome	98% rebadge success, $23M+ cost-out by Y2, 70% reduction in chargeback write-offs
Relevance	Highly relevant — direct rebadge at scale with fraud/disputes scope

REFERENCES

3 references available — detail on request

EXL

At-par

PRIMARY CASE STUDY (300+ FTE)

Industry / client	Fortune 50 Financial Services Provider
Scale	1,100+ FTE, multiple LOBs
Outcome	~1,100 FTEs transitioned in ~11 months, $32M+ committed benefit over 7 years, 23% productivity improvement
Relevance	Highly relevant — large-scale FS contact center transition

REFERENCES

IBM

Partial

PRIMARY CASE STUDY (300+ FTE)

Industry / client	Cemig (Brazil utility)
Scale	850 FTE call center + 600 FTE back office
Outcome	$80M OpEx reduction over 10 years, 30%+ savings, 50% run rate savings by Y5
Relevance	Relevant — large BPO transformation but not card-issuer specific

REFERENCES

3 references available — detail on request

3 references available — detail on request

DOWN-SELECT SIGNAL

Sutherland and Cognizant offer the strongest issuer-relevant proof points at scale; Genpact and EXL show credible large FS transitions; IBM is stronger on generic BPO transformation than cards; Ubiquity cannot be scored on structured evidence.

FIS IMPLICATION

Prioritize reference diligence on TS2/NICE-adjacent work and rebadge programs comparable to TMS scope before final down-select.

4.2 Industry track record

Financial services issuer services experience — years in market by function (Appendix B Tab 2.0 rows 13, 15–18).

Genpact	
FS issuer services	25+ yrs
Risk mitigation	25+ yrs
Customer care	20+ yrs
Back office	25+ yrs
Client ops oversight	29 yrs

300+ FS clients. Existing FIS relationship with 1,600+ FTE rebadge. NICE Platinum Partner.

EXL	
FS issuer services	20+ yrs
Risk mitigation	20+ yrs
Customer care	15+ yrs
Back office	20+ yrs
Client ops oversight	25+ yrs

100+ banking/capital markets clients. Supports 5 of top 6 global issuers. Existing FIS analytics relationship (CMO, Customer 360).

IBM	
FS issuer services	30+ yrs
Risk mitigation	34 yrs
Customer care	32 yrs
Back office	34 yrs
Client ops oversight	26 yrs

500+ banking/financial markets clients. #1 AI market share. 100K+ contact center agents migrated. 50K+ AI engagements.

Cognizant	
FS issuer services	29 yrs
Risk mitigation	15+ yrs
Customer care	15+ yrs
Back office	15+ yrs
Client ops oversight	15+ yrs

#1 HFS Cards & Payments BPO. Active delivery for 6 of top 10 US card issuers. TS2-certified teams. FCA Authorized Person in UK. Public company restrictions on client count disclosure.

Sutherland	
FS issuer services	19 yrs
Risk mitigation	19 yrs
Customer care	37 yrs (card programs: 18 yrs)
Back office	15+ yrs
Client ops oversight	20+ yrs

85+ FS clients. Serves 3 of top 5 global issuers (~70% global issuance). Existing FIS CIM relationship (550+ FTE, 40% cost reduction).

Ubiquity	
FS issuer services	10+ yrs
Risk mitigation	10+ yrs
Customer care	10+ yrs
Back office	10+ yrs
Client ops oversight	10+ yrs

200+ global enterprise clients. Strong in fintech. Mid-market scale — significantly smaller than other vendors. Tab 2.0 not submitted in standard format.

⚠ *FLAGGED: years estimated from proposal text, not structured response.*

DOWN-SELECT SIGNAL

Cognizant and Sutherland have the deepest issuer-services domain credentials. Cognizant is the #1-ranked Cards & Payments BPO with 29 years of experience and TS2 platform certification. Sutherland has an existing FIS CIM relationship and serves 3 of the top 5 global issuers. Genpact brings an existing FIS relationship with proven 1,600+ FTE rebadge execution. EXL's FIS relationship is analytics-focused (CMO/Customer 360), not operational. IBM's case studies are not card-issuer specific.

FIS IMPLICATION

Domain depth in issuer card servicing is a material differentiator for transition risk. Vendors without TS2/FIS platform experience will require longer knowledge transfer and carry higher early-stage defect risk. FIS should weight issuer-specific case studies heavily in scoring and validate claims through reference checks with shortlisted vendors.

4.3 Operational capabilities

Normalized comparison of disclosed operational capabilities (Appendix B Tab 2.0 rows 14, 19–25).

Metric	Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
4th party / sub-contractors	Affiliates only	Direct (single accountability)	Prefer direct; subs possible	Fully first-party	Standardized 3rd-party framework	Direct
Active FS clients	300+	100+	500+	125+	85+	200+ (all industries)
Countries of operation	10+ (PH, IN, RO, US, MX, others)	15+ (50+ delivery centers)	35+	10+ (company-owned)	20+	8
Languages supported	30+	25+	40+	30+	40+	6
Overall workforce	140,000+	63,000+	Large (not specified)	Not disclosed (public co.)	55,000+	15,000+

DOWN-SELECT SIGNAL

Genpact and EXL lead on disclosed active FS client count (300+ and 100+ respectively). Sutherland has the largest stated workforce at 55,000+. Cognizant has 125+ global clients. FIS may request further credentials from shortlisted vendors, including client overlap data.

FIS IMPLICATION

Treat non-disclosed fields as validation gaps, not neutral scores. FIS should request additional credential data including client overlap analysis from shortlisted vendors.

4.4 Contract posture

What they said on the SOW redline (Appendix C responses).

Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
Clauses modified 3 / 12	Clauses modified 4 / 12	Clauses modified 2 / 12	Clauses modified 5 / 12	Clauses modified 4 / 12	Clauses modified 3 / 12
Posture Partial (Collaborative)	Posture Partial (Collaborative)	Posture Partial (Protective)	Posture Partial (Protective)	Posture Partial (Collaborative)	Posture Partial (Collaborative)
KEY REDLINE THEMES • SLA credit recoup after 3 months above target • Annual benchmarking rights after 18 months • Y6–Y7 renewal pricing terms	KEY REDLINE THEMES • Liability cap • Reverse migration support commitment • MSA aligned to FIS client contractual commitments	KEY REDLINE THEMES • Entire proposal non-binding disclaimer • Investment contingent on full scope award • Fewer clause touchpoints but defensive commercial posture overall	KEY REDLINE THEMES • Termination fees recover KT, investments, stranded costs (12-month residual) • WARN Act budget is FIS responsibility • 60-day minimum client notification	KEY REDLINE THEMES • Replicates CIM commercial model structure • Multiple fields TBD pending due diligence • Alignment to existing FIS governance patterns	KEY REDLINE THEMES • Minimal redlines • Focus on operational continuity • Limited complexity in contracting posture
NOTABLE POSITIONS Collaborative redline volume; ties SLA economics to sustained performance and introduces renewal pricing mechanics in outer years.	NOTABLE POSITIONS Balances collaboration with explicit liability and exit/migration support commitments tied to FIS's downstream obligations.	NOTABLE POSITIONS Low clause count masks enforcement risk: non-binding posture must be cured before shortlist advancement.	NOTABLE POSITIONS Highest clause churn; protective on exit/termination economics — stress-test stranded-cost and client-notification flows in negotiation.	NOTABLE POSITIONS Familiar to FIS commercially; DD placeholders must be closed before signature readiness.	NOTABLE POSITIONS Light legal footprint — faster to paper but less pre-negotiated risk allocation detail vs. peers.

DOWN-SELECT SIGNAL

All vendors land at partial posture; IBM and Cognizant skew protective on enforceability and exit economics respectively; Ubiquity is the lightest touch legally.

FIS IMPLICATION

Use Cognizant termination/IBM non-binding positions as boundary cases in the negotiation playbook; close TBD fields on Sutherland before finalist stage.

Evaluator Scores

EVALUATOR SCORING OVERVIEW

Workshop 1 (Mar 31–Apr 2, 2026): 1–9 scores on 15 dimensions, weighted by category. Spider charts show evaluator spread; the heatmap shows dimension averages. Vendor columns match the Summary scorecard (Genpact through Ubiquity).

The Summary tab uses categorical badges alongside this numeric view: At-par, Partial, Below-par, and Not submitted / disclosed (missing submission or disclosure — not scored as weak performance). Workshop bands below (Unacceptable risk → Differentiated) describe evaluator judgment; they should be read together with the Summary scorecard for any down-select narrative.

E.0 Scoring methodology

Qualitative bands used to interpret proposal posture and diligence stance alongside numeric scores.

Label	Meaning
Unacceptable risk	Fundamental gaps; cannot proceed without major rework to approach, commercials, or risk posture.
Material gaps	Addressable but significant concerns remain — diligence and negotiation required before shortlist.
Strong	Meets requirements with minor issues; credible path to contract and delivery.
Differentiated	Exceeds requirements — best-in-class response, differentiated proof, or innovation with impact.

E.1 Evaluator score distribution by vendor

Spider web charts showing how individual evaluators scored each vendor across key dimensions. Click any chart to open this tab's heatmap and methodology.

Genpact

5.3

AVG SCORE (13 EVALUATORS)

PROCEED TO NEXT ROUND 54% (7/13)

EXL

6.3

AVG SCORE (14 EVALUATORS)

PROCEED TO NEXT ROUND 86% (12/14)

IBM

5.3

AVG SCORE (11 EVALUATORS)

PROCEED TO NEXT ROUND 55% (6/11)

Cognizant

6.2

AVG SCORE (14 EVALUATORS)

PROCEED TO NEXT ROUND 86% (12/14)

Sutherland

5.1

AVG SCORE (14 EVALUATORS)

PROCEED TO NEXT ROUND 50% (7/14)

Ubiquity

3.7

AVG SCORE (14 EVALUATORS)

PROCEED TO NEXT ROUND 21% (3/14)

E.2 Dimension-level score heatmap

Average evaluator scores by dimension (1–9 scale). Green = highest in field; red = lowest in field.

Dimension	Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
PARTNERSHIP READINESS (10%)						
Reference & Case Study	6.2	6.6	5.9	6.1	4.9	3.9
Operational Depth & Reach	5.9	6.0	4.6	7.0	4.3	3.4
OPERATIONAL EXCELLENCE & DELIVERY (22.5%)						
Contracting Posture	5.9	5.7	5.5	6.1	5.4	3.6
SLA Commitment	5.2	6.9	5.7	6.1	6.1	4.0
Language, Coverage & Compliance	4.4	5.9	5.2	6.7	4.6	4.4
Delivery Model Credibility	4.5	6.4	5.2	6.1	3.7	3.7
TECHNOLOGY & AI (22.5%)						
Tech Governance	5.5	6.3	6.5	6.1	4.9	3.7
Migration Plan Specificity	5.0	6.3	5.7	5.7	5.4	3.4
AI Overlay Innovation	5.5	6.7	6.6	5.9	5.7	4.1
CLIENT & WORKFORCE MIGRATION (22.5%)						
Wave Composition & Constraints	4.4	5.6	4.6	5.6	4.4	4.0
Sequencing & Revenue Pace	5.0	6.7	5.2	6.6	5.9	3.1
Workforce Transition	5.9	7.1	4.1	6.7	5.4	4.9
COMMERCIAL ATTRACTIVENESS (22.5%)						
Synergy Alignment	5.8	6.4	5.0	6.7	5.3	3.3

Dimension	Genpact	EXL	IBM	Cognizant	Sutherland	Ubiquity
Efficiency Assumptions	5.0	6.1	4.8	5.6	5.1	3.9
Investment Transparency	4.7	6.3	5.0	5.6	4.9	2.1

DOWN-SELECT SIGNAL

EXL and Cognizant lead across the most dimensions. EXL scores highest on SLA Commitment (6.9), Workforce Transition (7.1), Sequencing (6.7), and AI Innovation (6.7). Cognizant leads on Operational Depth (7.0), Language Coverage (6.7), and Synergy Alignment (6.7). Ubiquity scores lowest on 12 of 15 dimensions.

FIS IMPLICATION

Evaluator consensus is strongest for EXL and Cognizant advancing. IBM scores well on Tech Governance and AI Innovation but poorly on operations and workforce — a technology-strong but execution-weak profile. Genpact scores are moderate across all dimensions with high variance between evaluators. Sutherland and Ubiquity have the lowest evaluator confidence.

E.3 Evaluator advancement recommendation

Should the vendor proceed to the next round? (Yes/No by evaluator)

Vendor	Evaluators	Yes	No	% Yes
Cognizant	14	12	2	86%
EXL	14	12	2	86%
Genpact	13	7	6	54%
IBM	11	6	5	55%
Sutherland	14	7	7	50%
Ubiquity	14	3	11	21%
